Introduction

The Caribbean Advanced Proficiency Examinations (CAPE) are designed to provide certification of the academic, vocational and technical achievement of students in the Caribbean who, having completed a minimum of five years of secondary education, wish to further their studies. The examinations address the skills and knowledge acquired by students under a flexible and articulated system where subjects are organised in 1-Unit or 2-Unit courses with each Unit containing three Modules. Subjects examined under CAPE may be studied concurrently or singly.

The Caribbean Examinations Council offers three types of certification. The first is the award of a certificate showing each CAPE Unit completed. The second is the CAPE diploma, awarded to candidates who have satisfactorily completed at least six Units, including Caribbean Studies. The third is the CAPE Associate Degree, awarded for the satisfactory completion of a prescribed cluster of seven CAPE Units including Caribbean Studies and Communication Studies. For the CAPE diploma and the CAPE Associate Degree, candidates must complete the cluster of required Units within a maximum period of five years.

Recognized educational institutions presenting candidates for a CAPE Associate Degree in one of the nine categories must, on registering these candidates at the start of the qualifying year, have them confirm in the required form, the Associate Degree they wish to be awarded. Candidates will not be awarded any possible alternatives for which they did not apply.
Science plays a major role in the evolution of knowledge by empowering us with the skills required for creative and independent problem-solving. It arouses our natural curiosity, encourages our ability to enquire, to pose questions, and to conduct research required to obtain answers. This approach leads to the construction of hypotheses, theories and laws that help us to explain natural phenomena, to understand human activities in relation to natural phenomena, and through this to meet the challenge of survival and progress in a diverse and changing world.

The environment and natural resource base of the Caribbean are critical for the welfare of Caribbean people. Natural resource and environmental management and conservation are pre-requisites for sustainable development in the region. Achieving sustainable development requires an appreciation of the value of natural resources and the environment, and the development of the knowledge base and skills required for effective management. A firm grounding in these skills, knowledge and attitudes is provided through a study of Environmental Science.

Environmental Science is an interdisciplinary subject which draws on the content of several disciplines to offer a balanced scientific and holistic perspective of environmental issues. It provides knowledge, skills and attitudes to identify, prevent and solve environmental problems and thereby prepares students for ultimate careers in diverse fields of relevance to environmental management and to sustainable development of the Caribbean Region.

This CAPE syllabus in Environmental Science presents a coherent course of study which provides a specific knowledge base of the environment and which facilitates the development of related skills and attitudes. The syllabus takes into account the requirements for tertiary education at regional and international institutions. It is intended for a wide range of students, including traditional sixth form students, part-time, mature and private students.

This syllabus will contribute to the development of the Ideal Caribbean Person as articulated by the CARICOM Heads of Government in the following areas: respect for human life and awareness of the importance of living in harmony with the environment; multiple literacies; independent and critical thinking and the innovative application of science and technology to problem solving. Based on the UNESCO Pillars of Learning, this course of study will also contribute to a person who will learn how to do, learn to live together and learn to transform themselves and society.
AIMS

The syllabus aims to:

1. stimulate interest in the environment;
2. develop an understanding of the interdisciplinary and holistic nature of the environment;
3. develop knowledge and understanding of environmental issues and principles and the ability to apply these to environmental management, particularly in a Caribbean context;
4. develop the ability to identify critical research questions and formulate hypothesis or guiding statements.
5. develop the ability to collect, collate, analyze and interpret environmental data;
6. develop the ability to communicate environmental information and ideas logically and concisely in a variety of forms;
7. provide an understanding of interactions between people and the environment;
8. increase an awareness of the importance of living in harmony with the environment;
9. recognize and evaluate the socio-economic, political and ethical issues in Environmental Science;
10. foster positive attitudes, values and commitment to identifying, solving and preventing environmental problems;
11. develop an understanding of how natural resources and the environment affect quality of life and the quest for sustainable development in the Caribbean.

SKILLS AND ABILITIES TO BE ASSESSED

The skills and abilities which students are expected to develop on completion of the syllabus have been grouped under three main headings:

(i) Knowledge and Comprehension;
(ii) Application of Knowledge;
(iii) Practical Abilities.
Knowledge and Comprehension

The examination will test candidates’ skills and abilities to:

(i) Define terms and explain concepts;
(ii) describe processes;
(iii) state principles and properties;
(iv) explain interactions and inter-relationships.

Application of Knowledge

The examination will test candidates’ skills and abilities to:

(i) analyze and discuss different environmental situations;
(ii) evaluate and justify options (for the use of resources);
(iii) compare and contrast alternative solutions to environmental problems;
(iv) select techniques and methodologies appropriate to different environmental situations;
(v) suggest possible solutions to specific environmental problems;
(vi) draw inferences from environmental data.

Practical Abilities

The examination will test candidates’ skills and abilities to:

(i) select techniques, designs, methodologies and instruments appropriate to different environmental situations;
(ii) use instruments to measure environmental parameters;
(iii) collect and collate data;
(iv) analyze, interpret and present data;
(v) use quantitative techniques appropriately;
(vi) develop appropriate solutions to specific environmental problems.
♦ PRE-REQUISITES OF THE SYLLABUS

Any person with a good grasp of the contents of the Caribbean Secondary Education Certificate (CSEC) Integrated Science or Physics or Chemistry or Biology or Geography or Agricultural Science syllabuses, or the equivalent, should be able to pursue the course of study defined by the syllabus. However, successful participation in the course of study will also depend on the possession of good verbal and written communication skills.

♦ STRUCTURE OF THE SYLLABUS

The subject is organised in two Units. Each Unit contains a body of knowledge and skills drawn from several disciplines that impact on the environment. Unit 1 addresses Ecology, Human Population and Natural Resource Use, while Unit 2 deals with Agriculture, Energy, and Environmental Pollution.

A Unit comprises three Modules, each requiring 50 hours. The total time for each Unit, is therefore, expected to be 150 hours. Each Unit can independently offer students a comprehensive programme of study with appropriate balance between depth and coverage to provide a basis for further study in this field.

UNIT 1: Ecology, Human Population and Natural Resources

Module 1 - Fundamental Ecological Principles
Module 2 - Human Population and the Environment
Module 3 - Sustainable Use of Natural Resources

UNIT 2: Agriculture, Energy and Environmental Pollution

Module 1 - Agriculture and the Environment
Module 2 - Energy and the Environment
Module 3 - Pollution of the Environment

In this syllabus, the specific objectives which are denoted by an asterisk (*) are particularly suitable for practical exercises. However, the project need not be limited to these objectives.
UNIT 1: ECOLOGY, HUMAN POPULATION AND NATURAL RESOURCES

MODULE 1: FUNDAMENTAL ECOLOGICAL PRINCIPLES

GENERAL OBJECTIVES

On completion of this Module, students should:

1. understand the basic ecological concepts;
2. understand the processes that govern the interactions of organisms with the biotic and abiotic components of their environment;
3. understand the relationship between people and the environment;
4. acquire knowledge and develop practical and analytical skills.

SPECIFIC OBJECTIVES

Students should be able to:

1. differentiate between key ecological terms and concepts;

Ecology: species, population, community, ecosystem, biosphere, atmosphere, hydrosphere, lithosphere, habitat, niche, biome, ecotone.

2. explain the relationship between living organisms and their environment;

(i) The biotic and abiotic environments.
(ii) Tolerance ranges and limiting factors.
(iii) Ecological niches:

(a) fundamental niche;
(b) realised niche.

| 10. calculate species diversity; | $D = \frac{\sum n (n - 1)}{N (N - 1)}$  
Where  
$D$ – species Diversity  
$N$ – total number of organism of all species  
n - total number of organism of a particular species |
| 11. analyse the relationship between species diversity and ecosystem stability; | (i) Diversity within species.  
(ii) Diversity between species.  
(iii) Community and ecosystem stability. |
| 12. identify factors affecting population growth in a natural ecosystem; | (i) Biotic potential.  
(ii) Exponential population growth.  
(iii) Environmental resistance. |
| 13. explain the concept of carrying capacity; | |
| 14. evaluate human interactions within natural ecosystems; | (i) Human beings as part of the natural ecosystems.  
(ii) Benefits of natural ecosystems.  
(iii) Anthropogenic impact on ecosystems and biodiversity and the need to maintain its integrity. |
| 15. investigate at least two ecosystems in a territory;* | Consider both terrestrial and aquatic (freshwater and marine) ecosystems. |
UNIT 1
MODULE 1: FUNDAMENTAL ECOLOGICAL PRINCIPLES (cont’d)

16. measure and discuss environmental parameters in a given habitat;*

17. apply scientific method to experimental design and analysis; See suggested teaching-learning activities.

18. Present and interpret data using appropriate charts, table, graphs.

Suggested Teaching and Learning Activities

To facilitate students’ attainment of the objectives of this Module, teachers are advised to engage students in the teaching and learning activities listed below.

1. Define environmental science

2. Formulate hypothesis, develop guiding statements and generate and interpret data.

3. Discuss current environmental issues and highlight the importance of adopting an interdisciplinary approach.

4. Sample an ecosystem to determine population density and distribution.

5. Conduct study visits, to identify species diversity.

6. Investigate environmental parameters in a natural aquatic environment.

7. Create models of existing ecosystems in a specific location.

8. Create food webs and analyse possible disruption of feeding relationships.

9. Study the source(s) and distribution of a country’s freshwater supply and its level of dependence on natural water cycles.

10. Visit to an ecosystem to identify and quantify human use of its components.

UNIT 1
MODULE 2: HUMAN POPULATION AND THE ENVIRONMENT

GENERAL OBJECTIVES

On completion of this Module, students should:

1. understand the historical and geographical trends in human population growth and consumption patterns;
2. understand the socio-environmental impacts related to population growth;
3. understand the factors that affect the growth rate of human populations;
4. appreciate the need for sustainable development;
5. acquire knowledge and develop practical and analytical skills.

SPECIFIC OBJECTIVES

Students should be able to:

1. assess the relationship between people and the environment;
   (i) Adaptation of people to the environment (including but not limited to how people adapt to the environment, crops they grow, culture, clothes, shelter).
   (ii) Abiotic and biotic factors that affect the distribution of population and their activities.
   (iii) Dependence of people on ecological systems and processes.

2. explain the demographic characteristics of human population;
   (i) Age and sex structure.
   (ii) Fertility rates.
   (iii) Mortality rates.
   (iv) Life span and life expectancy.
   (v) Immigration.
   (vi) Emigration.
   (vii) Doubling time.
UNIT 1
MODULE 2: HUMAN POPULATION AND THE ENVIRONMENT (cont’d)

SPECIFIC OBJECTIVES

Students should be able to:

3. describe historical trends in human population size; 
   Compare historical and current trends in human population growth.

4. describe the current geographical distribution of human population growth; 
   Current geographical distribution of human population growth:
   (i) in developing nations;
   (ii) in developed nations.

5. interpret demographic tables, graphs and charts; 
   (i) Age and sex structure.
   (ii) Fertility rate, mortality rate, birth rate,

6. calculate changes in demographic characteristics; 
   (i) Population size and growth rate.
   Fertility rate; mortality rate; migration rate, birth rate.
   (ii) Percentage increase in population
   (iii) Doubling time = \( \frac{70}{\% \text{ annual growth}} \).

7. assess the factors affecting population growth rate; 
   (i) Culture.
   (ii) Religion.
   (iii) Level and cost of education.
   (iv) Social and economic status of women.
   (v) Availability of pension schemes.
   (vi) Level of affluence.
   (vii) Economic development.
UNIT 1
MODULE 2: HUMAN POPULATION AND THE ENVIRONMENT (cont’d)

SPECIFIC OBJECTIVES

Students should be able to:

8. assess the effectiveness of population control methods and measures;

9. assess the relationship between population growth and poverty;

10. describe current geographical variation in human consumption patterns;

EXPLANATORY NOTES

Population Control Measures:

(i) Direct - Family Planning measures and methods, government policies

(ii) Indirect - Natural disasters (floods, earthquakes, volcanoes, hurricanes).

(i) The Indices of poverty:

(a) access to education;

(b) access to health care;

(c) access to basic needs such as food, housing, water.

(ii) Per capita, Gross Domestic Product and Gross National Product (GDP and GNP), Human Development Index (HDI), Gender Development Index (GDI).

(iii) Environmental impacts of population growth (for example, deforestation in Haiti. Include social, biological, economic, physical considerations).

(i) Consumption patterns as quantified by statistics on:

(a) per capita water consumption;

(b) per capita food consumption;

(c) per capita fuel consumption;

(d) per capita greenhouse gas emissions;

(e) per capita waste production.
### UNIT 1
### MODULE 2: HUMAN POPULATION AND THE ENVIRONMENT (cont’d)

#### SPECIFIC OBJECTIVES

Students should be able to:

<table>
<thead>
<tr>

</tr>
<tr>
<td>24.</td>
<td>(ii) Goals of sustainable development.</td>
</tr>
</tbody>
</table>
(iii) Population growth and changing consumption patterns as constraints to sustainable development in a finite world.

(iv) Strategic Imperative for Sustainable Development #4 “Ensuring a Sustainable Level of Population” (Our Common Future, Brundtland Report, 1987).

Suggested Teaching and Learning Activities

To facilitate students’ attainment of the objectives of this Module, teachers are advised to engage students in the teaching and learning activities listed below.

1. Study a local population based on census statistics; generate population age structure, for all individuals and separately by sex.

2. Calculate crude birth rates, age-specific birth rates, total fertility rates, crude death rates, age-specific death rates, infant mortality rates, percentage annual increase in population size, and doubling times for populations.

3. Interpret World Population Data Sheets, as produced, for example, by the Population Reference Bureau Inc.

4. Arrange a debate on high population growth or high consumerism as principal causes of global environmental problems, using, for example, reports from the 1992 Rio Conference.

5. Conduct case studies of population size management and of related changes in consumption patterns.

6. Organise a debate on the definitions of development and sustainable development, and on the question of what constitutes an acceptable standard of living.

7. Discuss the main issues addressed by:

   (i) the 1972 Stockholm Conference;

   (ii) the 1980 International Union for the Conservation of Nature (IUCN) World Conservation Strategy;

   (iii) the 1987 Brundtland Report (Our Common Future);
UNIT 1
MODULE 2: HUMAN POPULATION AND THE ENVIRONMENT (cont’d)

(iv) the 1992 United Nations Conference on Environment and Development (The Rio Conference);
(v) the 1994 United Nations Conference on Small Island Developing States;
(vi) the 2002 World Summit on Sustainable Development *Johannesburg*.

UNIT 1
MODULE 3: SUSTAINABLE USE OF NATURAL RESOURCES

GENERAL OBJECTIVES

On completion of this Module, students should:

1. be aware of the major ‘natural resources’ in the Caribbean;
2. understand the factors affecting natural resource use and the environmental impacts of their use;
3. be aware of measures and tools available for sustainable use and conservation of natural resources;
4. understand the value of natural resources;
5. understand the concept of ecological sustainability and implications for natural resource use;
6. acquire knowledge and develop practical and analytical skills.

SPECIFIC OBJECTIVES

EXPLANATORY NOTES

Students should be able to:

1. explain the term natural resources;  
   Temporal Dimensions and limitations placed by technology.

2. differentiate between renewable and non-renewable natural resources; 
   (i) Types and examples of natural resources: renewable and non-renewable. 
   (ii) Types and examples of exhaustible and inexhaustible resources.

3. differentiate between the consumptive and non-consumptive use of natural resources; 
   (i) Consumptive use (logging, fishing, quarrying). 
   (ii) Non-consumptive use - bioprospecting, ecotourism, research.
UNIT 1
MODULE 3: SUSTAINABLE USE OF NATURAL RESOURCES (cont’d)

SPECIFIC OBJECTIVES

Students should be able to:

4. identify the major categories of natural resources in Caribbean countries;
   (i) Biodiversity:
       (a) species (b) genetic
       (c) Ecosystems: forest; coral reefs; wetlands; seagrass beds; mangroves; freshwater and marine ecosystems.
   (ii) Water as a resource, for example, waterfalls, lakes, streams, groundwater.
   (iii) Minerals and hydrocarbons: bauxite; gold; sand and gravel; oil; natural gas.
   (iv) Soil, landscape and seascape, (beaches, cliffs, mountains).

5. identify the location and distribution of natural resources in the Caribbean;

6. assess the importance of natural resources in the Caribbean;
   (i) Livelihood (Income generating activity).
   (ii) Foreign exchange earner.
   (iii) Food security.
   (iv) Raw material for industrial processes.
   (v) Recreation.
   (vi) Sacred and spiritual value.
   (vii) Ecosystem value.
   (viii) Intrinsic value.
   (ix) Research and teaching.
## SPECIFIC OBJECTIVES

Students should be able to:

7. evaluate factors affecting natural resource use in the Caribbean;

<table>
<thead>
<tr>
<th>EXPLANATORY NOTES</th>
</tr>
</thead>
<tbody>
<tr>
<td>(i) Political - government policies on natural resource use:</td>
</tr>
<tr>
<td>(a) economic development policies;</td>
</tr>
<tr>
<td>(b) environmental and natural resources policies.</td>
</tr>
<tr>
<td>(ii) Economic: role of foreign investment; export of natural resources as primary products; sectoral activities - tourism, agriculture, mining, manufacturing, national debt.</td>
</tr>
</tbody>
</table>

Refer to Specific Objective 10, Explanatory Note (iv).

8. access the environmental impact of natural resource use including tourism;

<table>
<thead>
<tr>
<th>(i) Biodiversity:</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) species depletion and extinction;</td>
</tr>
<tr>
<td>(b) habitat disruption and destruction;</td>
</tr>
<tr>
<td>(c) disruption of ecosystem processes.</td>
</tr>
</tbody>
</table>
UNIT 1
MODULE 3: SUSTAINABLE USE OF NATURAL RESOURCES (cont’d)

SPECIFIC OBJECTIVES

Students should be able to:

(ii) Water as a resource:
   (a) Pollution and depletion of surface and groundwater, degradation of water, depletion of aquifers. Human health risks (water borne disease)
   (b) watershed destruction.

(iii) Minerals and hydrocarbons:
   (a) physical conversion of vegetation and land;
   (b) transformation of landscape
   (c) dust and noise pollution;
   (d) pollution from the discharge of process chemicals;
   (e) sedimentation and siltation;
   (f) beach loss and change in river course;
   (g) oil spills;
   (h) human health risks;
   (i) social dynamics (displacement of communities and introduction of new settlements).
UNIT 1
MODULE 3: SUSTAINABLE USE OF NATURAL RESOURCES (cont’d)

**SPECIFIC OBJECTIVES**

Students should be able to:

9. justify the need for natural resource conservation;

<table>
<thead>
<tr>
<th>(iv)</th>
<th>Soil, landscape and seascape:</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a)</td>
<td>transformation of natural landscape to built environment;</td>
</tr>
<tr>
<td>(b)</td>
<td>soil degradation, erosion and sedimentation; soil productivity</td>
</tr>
<tr>
<td>(c)</td>
<td>beach erosion</td>
</tr>
<tr>
<td>(d)</td>
<td>degradation and destruction of coral reefs, seagrass beds and mangroves</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>(v)</th>
<th>Soil, landscape and seascape:</th>
</tr>
</thead>
<tbody>
<tr>
<td>(e)</td>
<td>transformation of natural landscape to built environment;</td>
</tr>
<tr>
<td>(f)</td>
<td>soil degradation, erosion and sedimentation; soil productivity</td>
</tr>
<tr>
<td>(g)</td>
<td>beach erosion</td>
</tr>
<tr>
<td>(h)</td>
<td>degradation and destruction of coral reefs, seagrass beds and mangroves</td>
</tr>
</tbody>
</table>

| (i) | The broad concept of natural resource conservation including: management; rehabilitation; restoration; preservation; conservation (in-situ and ex-situ). |
| (ii) | Reasons for resource conservation: |
| (a) | ecological: depletion or degradation of natural resources and the threat to sustainable development; conservation of components of life support systems; conservation of endangered and threatened species; |
| (b) | ethical: sacredness; right to exist; |
| (c) | aesthetical value. |
UNIT 1
MODULE 3: SUSTAINABLE USE OF NATURAL RESOURCES (cont’d)

10. describe measures and tools available for natural resource management and conservation;

(i) Rates and techniques for exploitation of renewable resources; Sustainable Yield Management.

(ii) Use of substitutes for non-renewable resources; use of appropriate technology. Refer to Module 2, Specific Objective 12.

(iii) Reduction and minimisation of waste - recycling of solid, liquid and gaseous wastes.

(iv) Use of economic instruments: user fees; taxes; penalties; incentives; economic valuation of natural resources; environmental accounting and greening of national budgets.

(v) Land Use Planning and Zoning Regulation; Integrated Development Planning and Integrated Coastal Zone Management.

(vi) Environmental Impact Assessments (A brief introduction to EIA as a Planning and decision making tool to natural resource management and conservation).
UNIT 1
MODULE 3: SUSTAINABLE USE OF NATURAL RESOURCES (cont’d)

(vii) Protected Area Systems (International Union for the Conservation of Nature (IUCN) Classification):
   a. role;
   b. ecotourism

(viii) Community Based Natural Resource Management (participation, monitoring and evaluation).

(ix) Environmental legislation, policies and plans (Sustainable Development Plans, Natural Environmental Action Plans (NEAP), Forest Management Plans, Integrated Coastal Zone Management Plans; Enforcement and implementation.

(x) Education, public awareness, advocacy and training. (Agenda 21, Chapter 36).

(xi) International environmental and conservation agreements.

(a) United Nations Framework Convention on Climate Change (UNFCCC and Kyoto Protocol);

(b) United Nations Convention on Biological Diversity (UNCBD);

(c) United Nations Convention to Combat Desertification (UNCCD);
UNIT 1  
MODULE 3: SUSTAINABLE USE OF NATURAL RESOURCES (cont’d)

### SPECIFIC OBJECTIVES

Students should be able to:

| 11. | analyse the effectiveness of measures implemented for natural resource management and conservation; |
| 12. | describe ways in which Indigenous People have used and managed their natural resources. |

### Suggested Teaching and Learning Activities

To facilitate students’ attainment of the objectives of this Module, teachers are advised to engage students in the teaching and learning activities listed below.

1. *Case studies of Community Based Natural Resources Management, for example, forest, wetlands.*
2. *Research on indigenous people and natural resources.*
3. *Field exercises: species identification; visit to industry; visits and assessment of community based natural resource management initiatives, visit to indigenous communities.*
UNIT 1  
MODULE 3: SUSTAINABLE USE OF NATURAL RESOURCES (cont’d)

4. Discuss the main issues relating to the natural obligation under UNFCCC, UNCCD and the UNCBD.

5. Visits to or lectures by representatives of natural resource agencies.

6. View videos and slides of natural resource management activities and protected areas.

RESOURCES

UNIT 2: AGRICULTURE, ENERGY AND ENVIRONMENTAL POLLUTION

MODULE 1: AGRICULTURE AND THE ENVIRONMENT

GENERAL OBJECTIVES

On completion of this Module, student should:

1. understand the concepts, types and role of agriculture in the Caribbean;

2. understand the environmental impacts of and threats to agricultural systems in the Caribbean;

3. have knowledge of environmentally sustainable practices in agricultural systems; in the Caribbean;

4. acquire knowledge, and develop practical and analytical skills.

SPECIFIC OBJECTIVES

Students should be able to:

1. compare and contrast agricultural systems in the Caribbean;*

(i) Definition of agriculture.

(ii) Characteristics of Agricultural systems with respect to commercial and small scale farming including subsistence.

(a) scale of operation;

(b) inputs: agro-chemicals, labour, machinery and equipment, energy, financing;

(c) productivity of systems: yield per unit input, for example, tonnes per hectare;

(d) mariculture; genetic engineering;

(e) aquaculture.

<td>(d) pollution from inappropriate use of agro-chemicals (pesticides; fertilisers); antibiotics and hormones in aquaculture and mariculture; eutrophication</td>
</tr>
</tbody>
</table>
UNIT 2
MODULE 1: AGRICULTURE AND THE ENVIRONMENT (cont’d)

SPECIFIC OBJECTIVES

Students should be able to:

(e) habitat destruction; loss of biodiversity;

(f) soil degradation: erosion; acidification; salinisation; waterlogging; soil compaction, monoculture leading to reduction in soil fertility;

(g) waste production: waste disposal and management; solid and liquid wastes;

(h) water degradation: sedimentation; changes in water discharge to coastal zone surface and ground water pollution;

(i) land degradation: inappropriate use of land types; hillside farming, slash and burn agriculture;

(j) reduced water availability for irrigation, mariculture and aquaculture;

(k) Climate change due to methane production.

4. **explain the features of sustainable agriculture;**

   (i) Ecological integrity.

   (ii) Economic viability.

   (iii) Social equity.

   (iv) Adaptability.

5. **discuss threats to sustainable agriculture;**

   (i) Natural disasters: flood, hurricane, volcano.
UNIT 2
MODULE 1: AGRICULTURE AND THE ENVIRONMENT (cont’d)

SPECIFIC OBJECTIVES

Students should be able to:

(ii) Climate change: temperature rise, sea level rise. Change in precipitation patterns.

(iii) External shocks: global markets, price fluctuations.

(iv) Certification to meet international standards.

(v) Importation of cheap agricultural products.

6. evaluate environmentally sustainable practices in agricultural systems;*

(i) Contour farming.

(ii) Terracing.

(iii) Crop rotation.

(iv) Conservation Tillage.

(v) Agro-forestry.

(vi) Pest control (biological and genetic) and Integrated pest management.

(vii) Organic farming.

(viii) Hydroponics.

(ix) Post-harvest management: waste utilisation and waste minimisation.

(x) Genetic engineering.

(xi) Plant and animal breeding.

7. present and interpret data using appropriate charts, tables and graphs.
UNIT 2
MODULE 1: AGRICULTURE AND THE ENVIRONMENT

Suggested Teaching and Learning Activities

To facilitate students’ attainment of the objectives of this Module, teachers are advised to engage students in the teaching and learning activities listed below.

1. *Conduct* field visits to agrochemical factories, agriculture, aquaculture and mariculture farms to observe and analyse their operations.

2. Provide the opportunities for students to identify agro-chemicals used in territory and analyse their composition.

3. Invite guest lecturers to discuss issues in agriculture.

4. Allow students to create models illustrating soil erosion.

5. Allow students to conduct fertiliser experiments on plants.

6. Conduct brain-storming sessions to explore entrepreneurial opportunities for use of un-used production (for example, fruit under trees; non-meat parts of livestock).

7. Collect and document information on land use in a country, to assess how prime agricultural land is being used.

8. Allow students to conduct investigations on waste production and management in an agricultural entity.

9. *Conduct investigation on water quality at agriculture operations.*

10. Give students assignments in which they compare soil types and fertility in different agricultural systems.

11. Conduct field trips to compare productivity of different farms.

**UNIT 2**
# MODULE 2: ENERGY AND THE ENVIRONMENT

## GENERAL OBJECTIVES

On completion of this Module, students should:

1. understand the nature of energy and its use;
2. understand the socio-economic and environmental impacts of provision and the use of energy.
3. appreciate the advantages of using renewable energy sources;
4. acquire knowledge and develop practical and analytical skills in the areas covered.

## SPECIFIC OBJECTIVES

<table>
<thead>
<tr>
<th>Students should be able to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. describe the nature, form and conversion of energy;</td>
</tr>
</tbody>
</table>

| (i) Definition: energy, kinetic energy, potential energy, power. |
| (ii) Units of measurement: Joule, MJ, TJ, GJ, Watt, MW, KWh. |
| (iii) Types of energy: solar, heat, light, electrical, nuclear, chemical. |
| (iv) Examples of energy and conversion, efficiency of conversion. |
| (v) Renewable and non-renewable sources of energy. |

| 2. explain the importance of energy to society; |

| (i) Use of energy within societies. |
| (ii) Socio-economic dependency on energy use. |
UNIT 2
MODULE 2: ENERGY AND THE ENVIRONMENT (cont’d)

SPECIFIC OBJECTIVES

Students should be able to:

3. describe the characteristics of various energy sources;*

EXPLANATORY NOTES

Primary Energy Sources

A. Non-renewable

(i) Fossil fuels: location of reserves, extraction, transportation processing and uses.

(ii) Nuclear Power: nuclear fission and nuclear fusion; use of nuclear fission, nuclear power plant (basic structure and operation).

(iii) Nuclear fuel cycle

B. Renewable

(i) Solar energy: harnessing and use:

   (a) active (photothermal);

   (b) passive (solar cookers, solar furnaces);

   (c) photovoltaic cells.

(ii) Indirect solar power: principal features and methods of harnessing:

   (a) wind energy;

   (b) hydroelectric energy;

   (c) biofuels: biomass fuel, biogas.

(iii) Geothermal energy.

(iv) Wave, tidal and ocean thermal energy.
## UNIT 2
### MODULE 2: ENERGY AND THE ENVIRONMENT (cont’d)

### SPECIFIC OBJECTIVES

Students should be able to:

### EXPLANATORY NOTES

**Secondary Energy Source**

Fuel cells: structure and process, Proton exchange fuel cell.

(i) Technological limitations

(ii) Geographical restrictions.

(iii) Reliability of supply.

(iv) Economic (cost of production), political (energy policy of country) and social.

</table>
8. *discuss various methods of energy conservation and improving efficiency;*

(i) Definition: energy conservation, energy efficiency.

(ii) *Approaches to energy conservation* (including but not limited to transportation energy conservation, domestic energy conservation, industrial energy conservation).

Improving energy efficiency:

(i) Energy efficient buildings.

(ii) Co-generation.

(iii) Combined cycles.

(iv) *Use of alternative energy sources* (for example, biofuels).

(v) *Use of renewable energy* (for example, wind, solar, water).

(vi) *Technological* (for example, types of lighting, appliances and machines).

*Sustainable lifestyle* (practices that reduce the demand on natural resources).

9. *outline the impact of various forms of energy in the environment;*

(i) Environmental:

(a) global warming;

(b) pollution impact;

(c) habitat destruction.

(ii) Socio-economic:

(a) health issues;

(b) dislocation of communities.

UNIT 2
MODULE 2: ENERGY AND THE ENVIRONMENT (cont’d)

Suggested Teaching and Learning Activities

To facilitate students’ attainment of the objectives of this module, teachers are advised to engage students in the teaching and learning activities listed below.

1. Conduct field visits to renewable energy facilities, for example, wind farms, solar water heater manufacturers and photovoltaic (PV) installations.
2. Conduct research on renewable energy systems used in the country and the extent of their market penetration.
3. Invite guest lecturers to discuss renewable energy.
4. Use contour maps to evaluate loss of area in the country if global warming leads to sea level rise.
5. Construct a simple device to measure energy use.
6. Construct a simple renewable energy device, for example, a solar water heater, a solar crop dryer, a PV powered device, and a simple solar cooker.
7. Allow students to investigate diversity and percentage contribution to total annual generation capacity in your country.
8. Conduct investigations on energy use in home and school and recommend methods of improving energy use and conservation.
9. Assign students to conduct an assessment of energy efficiency in buildings with respect to the features that characterise an energy efficient building.
10. Construct a model to depict an energy efficient building.
11. Assign students to conduct an investigation on the energy use of various sectors.
12. Collect documentation on policies that govern energy use, transportation and extraction, and promote energy conservation and efficiency.

UNIT 2
MODULE 3: POLLUTION OF THE ENVIRONMENT

GENERAL OBJECTIVES

On completion of this Module, students should:

1. be aware of the major types and sources of pollution;
2. understand the environmental impacts of pollution;
3. understand the methods available for monitoring, analyzing and mitigating pollution and its environmental impacts;
4. acquire knowledge and develop practical and analytical skills in the areas covered.

SPECIFIC OBJECTIVES

Students should be able to:

1. describe the general sources and nature of pollutants;
   (i) Definition of pollution and pollutant.
   (ii) Local examples of pollutants and incidences of pollution.
   (iii) Nature of pollutants: persistence, mobility, synergistic effects, toxicity.
   (iv) Movement through the environment.

2. identify environmental receptors of specific pollutants;*
   Environmental receptors (micro-organisms, plants, animals, humans).

3. describe the various pathways of pollution in the ecosystem and the biosphere;
   Environmental pathways (biotic and abiotic), feeding relationships, bioaccumulation and biomagnification.
UNIT 2
MODULE 3: POLLUTION OF THE ENVIRONMENT (cont’d)

SPECIFIC OBJECTIVES

Students should be able to:

4. outline the underlying causes of pollution;
   (i) Resource extraction, transportation, processing and use.
       - inappropriate technology, industrialisation;
   (ii) Population growth: behavioural pattern, lifestyle, consumption pattern.
       - lack of environmental consciousness;

5. outline the underlying causes of pollution;
   (iii) Institutional Framework:
       (a) Environmental standards, policies, legislation (Absence and limited implementation).
       (b) Limited economic instruments (lack of incentives – tax rebates, limited implementation of pollution principles).
       (iv) Lack of environmental ethics.

6. discuss the major sources, impact and mitigation of pollution.*
   A. **Atmospheric Pollution**
      (i) The Atmosphere.
      (a) structure and composition;
      (b) physical processes *and features* related to the movement of pollutants (*wind, air effects of topography on the movement of pollutants*).
UNIT 2
MODULE 3: POLLUTION OF THE ENVIRONMENT (cont’d)

SPECIFIC OBJECTIVES

Students should be able to:

(ii) Primary Air Pollutants:

(a) types: carbon monoxide; nitrogen oxides; sulphur oxides; suspended particulate matter; volatile organic compounds (include formulae of pollutant);

(b) sources;

(c) environmental pathways and receptors;

(d) environmental impacts (for example, public health, Carbon Monoxide (CO) poisoning, acid rain).

(iii) Secondary Air Pollutants

(a) types: photochemical smog and acid rain;

(b) mechanism of formation and characteristics including equations;

(c) environmental pathways and receptors;

(d) environmental impacts (for example, acidification of soil and water, damage to buildings).
UNIT 2
MODULE 3: POLLUTION OF THE ENVIRONMENT (cont’d)

SPECIFIC OBJECTIVES

Students should be able to:

(iv) Global Impacts of Atmospheric Pollutants

Global Warming:

(a) greenhouse effect and earth’s heat balance;

(b) sources of greenhouse gases: anthropogenic and natural;

(c) greenhouse effect and global warming;

(d) impacts of global warming (for example, sea level rise, increased temperatures, increased intensities of weather phenomena);

Ozone Depletion:

(a) Ozone depleting substances and sources: natural and anthropogenic substances;

(b) chemical equation of formation and destruction of ozone;

• Formation of Ozone

\[
O_2 (g) + hv O(g) + \rightarrow O^*(g)
\]

\[
O^*(g) + O_2 (g) + M(g) \rightarrow O_3 (g) + M^*(g) = \text{heat}
\]
UNIT 2
MODULE 3: POLLUTION OF THE ENVIRONMENT (cont’d)

SPECIFIC OBJECTIVES

Students should be able to:

- Destruction of Ozone

\[
\text{CF}_2\text{C}_1\text{g}(g) + \text{hv} \rightarrow \text{CF}_2\text{C}_1\text{g} + \text{Cl}(g)
\]

\[
\text{Cl}(g) + \text{O}_3(g) \rightarrow \text{ClO}(g) + \text{O}_2(g)
\]

or

\[
2\text{O}_3(g) \rightarrow 3\text{O}_2(g)
\]

Noise pollution:

(a) sources: industrial; commercial;
(b) social; cultural; transportation;
(c) intensity measurement and monitoring;
(d) health risks (for example, damage to ear drum, public health, stress).

(v) General Mitigative Measures and Monitoring:

(a) air quality monitoring methods;
(b) solutions (technological, education, public awareness, legislation and policy incentive, emission control and reduction methods);
UNIT 2

UNIT 2
MODULE 3: POLLUTION OF THE ENVIRONMENT (cont’d)

(c) coral reef destruction;
(d) fish kills;
(e) public health issues.

(vi) General mitigative measures and monitoring.

(a) solutions

SPECIFIC OBJECTIVES

Students should be able to:

(i) technological (treatment of drinking water, treatment of sewage and industrial effluent);

(ii) education and public awareness;

(iii) legislation and policy, for example, effluent discharge regulations.

(b) water quality monitoring methods (water quality parameters - nitrates, phosphates, Biological Oxygen Demand (BOD); Chemical Oxygen Demand (COD); Total Suspended Solids (TSS); faecal coliforms. An understanding of the protocol for testing each parameter is required);
C. Land Pollution

(i) Sources: industrial; agricultural; municipal; domestic.

(ii) Causes of land pollution:

(a) atmospheric fallout;
(b) waste disposal (*domestic, industrial, open dumps, sanitary landfills*);
(c) dumping of mineral extraction spoils;
(d) agricultural processes (see Unit 2 Module 1);
(e) oil spills.

(iii) Environmental pathways and receptors.

(iv) Environmental impacts (*for example, reduced aesthetic quality, lowering of land value, health implications, change in land use*).
**SPECIFIC OBJECTIVES**

Students should be able to:

(v) General mitigative measures and monitoring

(a) Waste minimisation (reduction, recycling, reuse, rethink).

(b) Environmental Impact Assessments. *(Refer to Unit 1, Module 3, Specific Objective 10.)*

(c) Legislation, incentives and penalties.

(d) Public awareness and participation.

(e) Public awareness and education.

(f) Clean up of pollution *(bioremediation and phytoremediation).*

(g) Incineration.

(a) (h) Research and development *(research on status of environmental components and development of policy).*

6. analyse the *environmental* impacts of pollution from specific sources;*

(i) Sources *(medical and industrial waste).*

(ii) Toxic effects *(carcinogenic, mutagenic, tetratogenic effects).*

(iii) Improper disposal methods.

7. assess the *effectiveness* of measures to mitigate environmental impacts of pollution;

8. *discuss* the importance of international conventions and agreements regarding pollution control;

(i) *United Nations Convention on Climate Change (UNFCCC) and Kyoto Protocol.*

(ii) Montreal Protocol.

9. interpret data using appropriate charts, tables and graphs.

Suggested Teaching and Learning Activities

To facilitate students’ attainment of the objectives of this Module, teachers are advised to engage students in the teaching and learning activities listed below.

1. Assign students to investigate and categorise local pollution problems.
2. Assign students to monitor individual waste production on a weekly basis.
3. Conduct research to compare emission from leaded, unleaded and diesel fuels.
4. Assign experimental work to investigate lead content of vegetation near highways.
5. Conduct field studies on the collection and disposal of garbage.
6. Collect information on industries and their potential to produce pollution.
7. Conduct research to analyse the effectiveness of local legislation to reduce greenhouse gases.
8. Conduct field studies on industries or factories and analysis of their processes with respect to developing waste reduction strategies.

Assign students to investigate respiration ailments in a community.
UNIT 2
MODULE 3: POLLUTION OF THE ENVIRONMENT (cont’d)

9. Assign students to analyse air and water quality in urban areas.
10. Review relevant literature to establish size and location of ozone hole.
11. Assign students to carry out water quality measurements: and faecal coliform: BOD, COD, TSS, pH.
12. Conduct an investigation on the categories and sources of pollutants in water bodies.
13. Conduct experiments to identify the relationship between DO and temperature.
14. Collect information on the level of sewage treatment at selected treatment plants.
15. Conduct soil sampling exercise for pollutants and their concentration levels (urban, agricultural and industrial areas).
16. Assign students to conduct home audit for sources and categories of pollutants.
17. Conduct investigations on the extent of recycling activities in the country, identification of waste that could be recycled.
18. Conduct brain-storming session on business opportunities based on use of waste as a resource.
19. Assign students to measure noise levels.
20. Assign students to develop strategic plans on climate change.
21. Encourage students to garner information on national policies on pollution control.
22. Assign students to collect data on environmental impact assessments and make recommendations.

♦ OUTLINE OF ASSESSMENT

Each Unit will be assessed separately. The scheme of assessment for each Unit will be the same. A candidate’s performance on each Unit will be reported as an overall grade and a grade on each Module of the Unit. The assessment will comprise two components, external and internal.

EXTERNAL ASSESSMENT (70%)

At the end of the academic year in which a Unit of the syllabus is taken, the student is expected to sit two written papers for a total of 4 hrs.

**Paper 01**
1 hour 30 minutes

The paper comprises forty-five compulsory, multiple-choice items, fifteen based on each Module.

**Paper 02**
2 hours 30 minutes

The paper comprises six compulsory questions, two based on each Module.

INTERNAL ASSESSMENT (30%)

The Internal Assessment in respect of each Unit will contribute 30% to the total assessment of a candidate’s performance on that Unit.

(i) **Paper 03A**

The assessment for each Unit will be in the form of a journal. *The journal will comprise reports on site visits and laboratory exercises. The journal should focus on at least one specific objective from any of the three Modules in the Unit and incorporate the relevant practical skills.*

(ii) **Paper 03B**

This is an alternate to Paper 03A and is intended for private candidates.

MODERATION OF INTERNAL ASSESSMENT

Each year an Internal Assessment Record Sheet will be sent to schools submitting students for the examinations.

All Internal Assessment Record Sheets and sample of assignments must be submitted to CXC by May 31 of the year of the examination. A sample of assignments will be requested for moderation purposes by CXC. These samples will be re-assessed by CXC Examiners who moderate the Internal Assessment. Teachers’ marks may be adjusted as a result of moderation. The Examiners’ comments will be sent to schools.
Copies of the students’ assignment that are not submitted must be retained by the school until three months after publication by CXC of the examination results.

ASSESSMENT DETAILS

External Assessment by Written Papers (70% of Total Assessment)

Paper 01 (1 hour 30 minutes – 30% of Total Assessment)

1. **Composition of the Paper**
   
   The paper comprises forty-five multiple-choice items, fifteen items based on each Module.

2. **Syllabus Coverage**
   
   (i) Knowledge of the entire syllabus is required
   
   (ii) The intention of this paper is to test candidates’ knowledge across the breadth of the syllabus.

3. **Question Type**
   
   Questions may be based on diagrams, data, graph, photographs or prose.

4. **Mark Allocation**
   
   (i) One mark will be assigned for each item.
   
   (ii) The maximum mark available for this paper is forty-five and will be weighted to ninety.
   
   (iii) This paper contributes 30% towards the final assessment.
   
   (iv) The marks will be awarded for Knowledge and Comprehension, Application of Knowledge and Practical Abilities.

5. **Use of Calculators**
   
   Candidates will be allowed to use a non-programmable calculator in the examinations. Each candidate is responsible for providing his/her own calculator and to ensure that it functions throughout the examinations.

6. **Use of Geometrical Instruments**
   
   Candidates are allowed to use geometrical instruments in the examinations. Each candidate is responsible for providing his or her own instruments.
Paper 02 (2 hours 30 minutes – 70% of Total Assessment)

1. **Composition of Paper**

   The paper is arranged into three sections. Each section represents one of the three Modules of the Unit. Each section contains two compulsory questions.

2. **Syllabus Coverage**

   (i) Comprehensive knowledge of the entire syllabus is required.

   (ii) Each question may focus on a single theme or develop a single theme or several unconnected themes.

3. **Question Type**

   Questions are of a free-response form and may be based on diagrams, data, graph, photographs or prose. Responses are to be written in the separate booklet provided.

4. **Mark Allocation**

   (i) Each question is worth 20 marks and the number allocated to each sub-question will appear on the examination paper.

   (ii) The maximum mark for this paper is 120.

   (iii) This paper contributes 40% towards the final assessment.

   (iv) The marks will be awarded for Knowledge and Comprehension, Application of Knowledge and Practical Abilities.

5. **Use of Calculators**

   Candidates will be allowed to use a non-programmable calculator in the examinations. Each candidate is responsible for providing his/her own calculator and to ensure that it functions throughout the examinations.

6. **Use of Geometrical Instruments**

   Candidates are allowed to use geometrical instruments in the examinations. Each candidate is responsible for providing his or her own instruments.
INTERNAL ASSESSMENT

Internal Assessment is an integral part of student assessment in the course covered by this syllabus. It is intended to assist students in acquiring certain knowledge, skills, and attitudes that are associated with the subject. The activity for the Internal Assessment is linked to the syllabus and should form part of the learning activities to enable the student to achieve the objectives of the syllabus. During the course of study for the subject, students obtain marks for the competence they develop and demonstrate in undertaking their Internal Assessment assignments. These marks contribute to the final marks and grades that are awarded to students for their performance in the examination.

During the course of study for the subject, students obtain marks for the competence they develop and demonstrate in undertaking their Internal Assessment assignments. These marks contribute to the final marks and grades that are awarded to students for their performance in the examination.

The guidelines provided in this syllabus for selecting appropriate tasks are intended to assist teachers and students in selecting assignments that are valid for the purpose of Internal Assessment. The guidelines provided for the assessment of these assignments are intended to assist teachers in awarding marks that are reliable estimates of the achievement of students in the Internal Assessment component of the course. In order to ensure that the scores awarded by teachers are not out of line with the CXC standards, the Council undertakes the moderation of a sample of the Internal Assessment assignments marked by each teacher.

The Internal Assessment component is compulsory. The assignment is assessed by the teacher, using Internal Assessment Criteria provided below.

The following are the skills that will be assessed:

(i) the selection of techniques, designs, methodologies and instruments appropriate to different environmental situations;

(ii) the collection and collation of data;

(iii) the analysis, interpretation and presentation of such data;

(iv) *the use of appropriate quantitative techniques*;

(v) the development of appropriate models as possible solutions to specific environmental problems.

The Internal Assessment should relate to at least ONE specific objective in the Unit.
CRITERIA FOR THE INTERNAL ASSESSMENT

The following are the guidelines for assessing the journal.

1. The journal is internally assessed by the teacher and externally moderated by CXC.

2. Each candidate will be required to complete a journal in which he/she will be expected to demonstrate the practical skills listed on Page 53.

THE JOURNAL

The reports for a series of site-visits and laboratory exercises associated with the site-visits are recorded in the journal.

The journal will comprise:

(a) an entry for each site visit
(b) a report for the journal
(c) a final report on the set of site-visits

Each student is expected to conduct and write a final report on a minimum of four (4) site visits and four (4) laboratory exercises.

(i) Site visits should be based either on visits to one site where changes over a period of time are observed OR on a series of visits to different sites to compare and contrast similar processes or occurrences.

(ii) Laboratory exercises should relate to each or any of the series of site-visits.

(iii) The entries for the site-visits and the reports for the laboratory exercises MUST inform the final report for the journal. The final report must not exceed 1500 words.

Teachers are expected to work closely with students by providing feedback on all aspects of the project.

Students should be encouraged to develop the habit of keen observation, relevant and precise reporting, concise recording and the ability for critical thinking, problem-solving and decision-making.

Each student is required to keep a record (journal) for the reports on the laboratory exercises and a final report for entries on the site-visits.

It is recommended that the assessment criteria be available to candidates at all times.

(A) Site-Visit

The entry for each site-visit should be recorded using the format below:
(i) Entry Number
(ii) Date
(iii) Site (Location)

(iv) Objective(s) 1 mark
(v) Activities 4 marks
(vi) Observations 2 marks
(vii) Comments 2 marks
(viii) Follow-up Activities 1 mark

10 Marks

The teacher is required to assess each site-visit for a maximum of 10 marks. The total from a maximum of 40 marks should be scaled to 10 marks. No fractional marks should be awarded.

(B) Laboratory Exercise

The areas that will be assessed in the report for each laboratory exercise are:

(a) Planning and Designing; 4 marks
(b) Observation and Recording; 5 marks
(c) Manipulation and Measurement; 2 marks
(d) Analysis and Interpretation; 6 marks
(e) Reporting and Presentation.

Total 20 marks

(Scaled to 10 marks)

The teacher is required to mark and award a score out of a maximum of 20 marks for each laboratory report and then scale to 10 marks. No fractional marks should be awarded.

These entries for the site-visits and the laboratory reports should inform the final report for the journal.

Laboratory exercises should be reported using the format below:

i) Title
ii) Aim
iii) Materials  iv) Procedure
v) Data Collection/Results  vi) Discussion and Conclusions

(C) **Final Report for Journal**

The areas that will be assessed in the final report for the journal are summarised in the table below.

<table>
<thead>
<tr>
<th>Final Report for Journal</th>
<th>Marks</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Clarity of the statement of the real world problem being studied (project description)</td>
<td>2</td>
</tr>
<tr>
<td>2. Definition of the scope of the project (purpose of project)</td>
<td>3</td>
</tr>
<tr>
<td>3. Adequacy of information/data gathered and the appropriateness of the design chosen for investigating the problem</td>
<td>3</td>
</tr>
<tr>
<td>4. Appropriateness of the literature review</td>
<td>5</td>
</tr>

</table>
ASSESSING THE JOURNAL REPORT
DESCRIPTORS FOR JOURNAL REPORT

1. **Problem Statement**
   - Problem clearly stated 1
   - Problem clearly stated and concise 2

2. **Purpose of Project**
   - Purpose stated 1
   - Purpose stated and some variables identified 2
   - Purpose stated and all variables identified 3

3. **Methods of Data Collection**
   - Data collection design described 1
   - Design clear, appropriate, carried out with few flaws 2
   - Design clear, appropriate, carried out without flaws 3

4. **Literature Review**
   - Literature review attempted 1-2
   - Literature review appropriate 3-4
   - Literature review appropriate and comprehensive 5

5. **Presentation of Data**
   - Used graphs, tables, figures and statistical symbols adequately 1
   - Used graphs, tables, figures and statistical symbols creatively 2

6. **Analysis of Data**
   - Some analysis attempted 1
   - Analysis adequately done 2
   - Analysis used 2 or more approaches 3
   - Analysis used a variety of approaches or exceeded requirements of the course 4

7. **Discussion of Findings**
   - Some findings stated 1
   - All findings stated 2
   - Some findings stated and supported by data 3
   - All findings stated and supported by data 4
   - Some findings stated, supported by data and their interpretability addressed 5
   - All findings stated, supported by data and their interpretability addressed 6
   - Reliability or validity, and usefulness of some findings addressed 7
   - Reliability or validity, and usefulness of all findings addressed 8
8. **Conclusion**
   - Conclusion clear and based on finding(s)   
   - Conclusion clear, based on finding(s) and valid   
   - Conclusion clear, based on finding(s), valid and related to purpose(s) of project

9. **Recommendations**
   - Few recommendations based on findings   
   - Most recommendations based on findings   
   - Recommendations fully derived from findings

10. **Communication of Information**
    - Information communicated in a fairly logical manner with several grammatical errors
    - Information communicated in a logical manner with some grammatical errors
    - Information communicated in a logical manner with few grammatical errors
    - Information communicated in a logical manner with no grammatical errors

11. **Bibliography**
    - Number of references is less than 4
    - Number of references is greater than 4, written using a consistent convention

**Total** 40 marks

The overall assessment of each student is based on the entries for the four site-visits (40 marks), four laboratory exercises (40 marks) and the final report for the journal (40 marks).

A total of 90 marks summarised in the table below:

<table>
<thead>
<tr>
<th>Component</th>

</tbody>
</table>

**GENERAL GUIDELINES FOR TEACHERS**

1. The teacher is required to mark the journal and final marks must be recorded out
of 90.

2. The school must retain all journals for at least three months after publication of the results since journals may be requested by CXC for moderation purposes.

3. The specific objectives highlighted by an asterisk are suitable for Internal Assessment, but the assignments need not assess only these objectives;

4. The reliability of the marks awarded is a significant factor in the Internal Assessment, and has far reaching implications for the candidate’s final grade. Teachers are asked to note the following:

   (i) the marks awarded to the journal must be carefully transferred to the CXC Internal Assessment forms;

   (ii) the teacher must allocate one-third of the total score for the Internal Assessment to each Module. **Fractional marks should not be awarded.** In cases where the mark is not divisible by three, then the allocation is as follows:

       (a) When the remainder is 1 mark, the mark is allocated to Module 3;

       (b) When the remainder is 2, then a mark is allocated to Module 3 and the other mark to Module 2.

       For example, 35 marks are allocated as follows:

       \[
       \frac{35}{3} = 11 \text{ remainder } 2 \text{ so } 11 \text{ marks to Module 1 and } 12 \text{ marks to each of Modules 2 and 3.}
       \]

   (iii) the standard of marking should be consistent.

5. Candidates who do not fulfil the requirements of the Internal Assessment will be considered absent from the whole examination.
REGULATIONS FOR PRIVATE CANDIDATES

Candidates who are registered privately will be required to sit Paper 01, Paper 02 and Paper 03B. Detailed information on Papers 01 and 02 is given on pages 49 - 51 of this syllabus.

Paper 03B (Alternate to Internal School Based-Assessment) 30%

This paper will be of two (2) hours duration and will consist of THREE questions as follows:

(i) a practical question;

(ii) a question based on data collection;

(iii) a planning and design exercise.

This paper will constitute 30% of the overall assessment of the candidates performance on the Unit.

REGULATIONS FOR RESIT CANDIDATES

Resit candidates must complete Papers 01 and 02 and Paper 03 of the examination for the year for which they re-register. Resit candidates may elect not to repeat the Internal Assessment component, provided they re-write the examination no later than two years following their first attempt.

Candidates may opt to complete an Internal Assessment (IA) for each Unit written or may opt to re-use another IA score which satisfies any of the conditions listed below.

(i) A candidate who re-writes the examination in the same Unit within two years may re-use the moderated IA score earned in the previous sitting within the preceding two years.

(ii) Candidates re-using IA scores in this way must register as “Resit candidates” and provide the previous candidate number.

All resit candidates may enter through schools, recognized educational institutions, or the Local Registrar’s Office.
### ASSESSMENT GRID

The Assessment Grid for each Unit contains marks assigned to papers and to Modules and the percentage contributions of each paper to the total score.

## GLOSSARY

<table>
<thead>
<tr>
<th>WORD</th>
<th>DEFINITION/MEANING</th>
<th>NOTES</th>
</tr>
</thead>
<tbody>
<tr>
<td>analyse</td>
<td>examine in detail</td>
<td></td>
</tr>
<tr>
<td>annotate</td>
<td>add a brief note to a label</td>
<td>Simple phrase or a few words only.</td>
</tr>
<tr>
<td>apply</td>
<td>use knowledge/principles to solve problems</td>
<td>Make inferences/conclusions.</td>
</tr>
<tr>
<td>assess</td>
<td>present reasons for the importance of particular structures, relationships or processes</td>
<td>Compare the advantages and disadvantages or the merits and demerits of a particular structure, relationship or process.</td>
</tr>
<tr>
<td>calculate</td>
<td>arrive at the solution to a numerical problem</td>
<td>Steps should be shown; units must be included.</td>
</tr>
<tr>
<td>classify</td>
<td>divide into groups according to observable characteristics</td>
<td></td>
</tr>
<tr>
<td>comment</td>
<td>state opinion or view with supporting reasons</td>
<td></td>
</tr>
<tr>
<td>compare</td>
<td>state similarities and differences</td>
<td>An explanation of the significance of each similarity and difference stated may be required for comparisons which are other than structural.</td>
</tr>
<tr>
<td>construct</td>
<td>use a specific format to make and/or draw a graph, histogram, pie chart or other representation using data or material provided or drawn from practical investigations, build (for example, a model), draw scale diagram</td>
<td>Such representations should normally bear a title, appropriate headings and legend.</td>
</tr>
<tr>
<td>deduce</td>
<td>make a logical connection between two or more pieces of information; use data to arrive at a conclusion</td>
<td></td>
</tr>
<tr>
<td>define</td>
<td>state concisely the meaning of a word or term</td>
<td>This should include the defining equation/formula where relevant.</td>
</tr>
<tr>
<td>demonstrate</td>
<td>show; direct attention to...</td>
<td></td>
</tr>
<tr>
<td>WORD</td>
<td>DEFINITION/MEANING</td>
<td>NOTES</td>
</tr>
<tr>
<td>--------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>derive</td>
<td>to deduce, determine or extract from data by a set of logical steps some relationship, formula or result</td>
<td>This relationship etc. may be general or specific.</td>
</tr>
<tr>
<td>describe</td>
<td>provide detailed factual information of the appearance or arrangement of a specific structure or a sequence of a specific process</td>
<td>Description may be in words, drawings or diagrams or any appropriate combination. Drawings or diagrams should be annotated to show appropriate detail where necessary.</td>
</tr>
<tr>
<td>determine</td>
<td>find the value of a physical quantity</td>
<td></td>
</tr>
<tr>
<td>design</td>
<td>plan and present with appropriate practical detail</td>
<td>Where hypotheses are stated or when tests are to be conducted, possible outcomes should be clearly stated and/or the way in which data will be analyzed and presented.</td>
</tr>
<tr>
<td>develop</td>
<td>expand or elaborate an idea or argument with supporting reasons</td>
<td></td>
</tr>
<tr>
<td>diagram</td>
<td>simplified representation showing the relationship between components.</td>
<td></td>
</tr>
<tr>
<td>differentiate/ distinguish (between/among)</td>
<td>state or explain briefly those differences between or among items which can be used to define the items or place them into separate categories.</td>
<td></td>
</tr>
<tr>
<td>discuss</td>
<td>present reasoned argument; consider points both for and against; explain the relative merits of a case</td>
<td></td>
</tr>
<tr>
<td>draw</td>
<td>make a line representation from specimens or apparatus which shows an accurate relation between the parts</td>
<td>In the case of drawings from specimens, the magnification must always be stated.</td>
</tr>
<tr>
<td>estimate</td>
<td>make an approximate quantitative judgement</td>
<td>The use of logical supporting reasons for a particular point of view is more important than the view held; usually both sides of an argument should be considered.</td>
</tr>
<tr>
<td>evaluate</td>
<td>weigh evidence and make judgements based on given criteria</td>
<td></td>
</tr>
<tr>
<td>WORD</td>
<td>DEFINITION/MEANING</td>

Specimen Papers and Mark Schemes/Keys

**Specimen Papers:**
- Unit 1, Paper 01
  Unit 1, Paper 02
  Unit 1, Paper 03/2
  
- Unit 2, Paper 01
  Unit 2, Paper 02
  Unit 2, Paper 03/2

**Mark Schemes and Keys:**
- Unit 1, Paper 01
  Unit 1, Paper 02
  Unit 1, Paper 03/2
  
- Unit 2, Paper 01
  Unit 2, Paper 02
  Unit 2, Paper 03/2
READ THE FOLLOWING INSTRUCTIONS CAREFULLY.

1. This test consists of 45 items. You will have 90 minutes to answer them.

2. In addition to this test booklet, you should have an answer sheet.

3. Do not be concerned that the answer sheet provides spaces for more answers than there are items in this test.

4. Each item in this test has four suggested answers lettered (A), (B), (C), (D). Read each item you are about to answer and decide which choice is best.

5. On your answer sheet, find the number which corresponds to your item and shade the space having the same letter as the answer you have chosen. Look at the sample item below.

**Sample Item**

The interaction of plants and animals with components such as air and water describes

**Sample Answer**

(A) a biome
(B) a biosphere
(C) an ecosystem
(D) an ecological niche

The best answer to this item is “an ecosystem”, so answer space (C) has been shaded.

6. If you want to change your answer, erase it completely before you fill in your new choice.

7. When you are told to begin, turn the page and work as quickly and as carefully as you can. If you cannot answer an item, omit it and go on to the next one. You may return to the omitted item later. Your score will be the total number of correct answers.

8. You may use a silent electronic calculator.

**DO NOT TURN THIS PAGE UNTIL YOU ARE TOLD TO DO SO.**
Item 1 refers to the following food chain.
Grass → grasshopper → frog → snake

1. The original source of energy for the food chain is the
   (A) frog
   (B) grass
   (C) sunlight
   (D) grasshopper

2. Which of the following are characteristics of a biome?
   I. Climate barriers determine its boundaries.
   II. It encompasses interacting ecosystems.
   III. It is the next level of ecological organisation above the ecosystem.
   IV. It is usually confined to a relatively small geographical area.
   (A) I and III only
   (B) I and IV only
   (C) I, II and III only
   (D) II, III and IV only

3. The relationship between algae and the coral polyp is an example of
   (A) mutualism
   (B) parasitism
   (C) competition
   (D) commensalism

4. Which of the following factors will cause a decline in the population of organisms?
   I. Adverse climate conditions
   II. Food shortage and disease
   III. Predation and competition
   IV. Suitable habitat
   (A) I and III only
   (B) III and IV only
   (C) I, II and III only
   (D) I, II and IV only

5. An ecotone is BEST described as the boundary between
   (A) two types of communities
   (B) two types of ecological niches
   (C) plant and animal communities
   (D) two types of ecological communities

6. The broken line at X in the graph above represents the
   (A) biotic potential
   (B) carrying capacity
   (C) environmental resistance
   (D) maximum population size
7. Succession is one of the most important ecological processes. Which of the following are sites where primary succession may occur?

I. At the edge of retreating glaciers
II. Sand dunes along sandy shores
III. The lava flows of volcanoes
IV. Abandoned pastures

(A) I and IV only
(B) II and III only
(C) I, II and III only
(D) I, II and IV only

8. Item 8 refers to the graph below which shows birth and death rates for the period 1900 – 2000 for a Caribbean country.

8. In which year was the LOWEST population growth rate recorded?

(A) 1910
(B) 1960
(C) 1980
(D) 2000

9. Which pair of organisms BEST illustrates the feeding relationship referred to as ‘parasitism’?

(A) Rat → Owl
(B) Cow → Tick
(C) Tick → Egret
(D) Cow → Egret

10. Which of the following is TRUE about predator-prey relationships?

I. Predators help to keep prey populations in check.
II. Predators may help to drive natural selection in the prey populations.
III. Prey populations do not influence natural selection in predators.
IV. Predator-prey relationships are examples of commensalism.

(A) I and II only
(B) I and III only
(C) I and IV only
(D) I, II and IV only

11. Which of the following types of islands would have the LOWEST biodiversity?

(A) Volcanic
(B) Small isolated
(C) Large continental
(D) Small continental

12. Traditionally, woodpecker (A) was found in relatively large numbers in a particular ecosystem. However, since the addition of a new species, woodpecker (B), its population has greatly decreased. This example can be used to illustrate

(A) genetic drift
(B) a realised niche
(C) a fundamental niche
(D) the competitive exclusion principle
Items 13–14 refer to the table below which shows the total number of various species within a marine community that has a total number of 100 individuals.

<table>
<thead>
<tr>
<th>Species</th>
<th>Total number of organisms</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cod</td>
<td>22</td>
</tr>
<tr>
<td>Haddock</td>
<td>28</td>
</tr>
<tr>
<td>Capelin</td>
<td>40</td>
</tr>
<tr>
<td>Shark</td>
<td>3</td>
</tr>
<tr>
<td>Harpseal</td>
<td>7</td>
</tr>
</tbody>
</table>

13. Using the formula \( D = \frac{N(N-1)}{\sum n(n-1)} \), the species diversity (D) is

(A) 2.50  
(B) 3.28  
(C) 3.50  
(D) 4.50

14. What percentage of the marine community is made up of haddock and shark?

(A) 25%  
(B) 28%  
(C) 31%  
(D) 35%

16. Which of the above are demographic indices of the human population?

(A) I and II only  
(B) I and III only  
(C) I, II and III only  
(D) I, II and IV only

17. Which of the variables above are used to determine the Human Development Index (HDI)?

(A) I, II and IV only  
(B) I, III and IV only  
(C) II, III and IV only  
(D) I, II, III and IV

18. Which of the following indices of poverty is based on longevity, education and income for both men and women?

(A) Gross National Product (GNP)  
(B) Gross Domestic Product (GDP)  
(C) Human Development Index (HDI)  
(D) Gender Development Index (GDI)

19. The difference between birth rate and death rate is called

(A) the fertility rate  
(B) doubling time  
(C) the life expectancy  
(D) population growth
20. When the death rate of a country is higher than the birth rate, the population size
   (A) decreases
   (B) increases slowly
   (C) increases rapidly
   (D) remains the same

21. The MOST successful method of controlling a country’s population size is
   (A) birth control
   (B) natural disasters
   (C) financial incentives
   (D) government quotas on children produced

Items 22 - 23 refer to the following table of population growth rates for Jamaica and Trinidad and Tobago in 2009.

<table>
<thead>
<tr>
<th>Country</th>
<th>Population (million.)</th>
<th>Annual Growth Rate (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jamaica</td>
<td>2.7</td>
<td>1.2</td>
</tr>
<tr>
<td>Trinidad and Tobago</td>
<td>1.3</td>
<td>0.3</td>
</tr>
</tbody>
</table>

22. The estimated population of Trinidad and Tobago for the year 2010 is
   (A) 3,900
   (B) 390,000
   (C) 1,303,900
   (D) 1,363,900

23. The estimated doubling time for Jamaica is
   (A) 45 years
   (B) 58 years
   (C) 69 years
   (D) 72 years

24. A country is MOST likely to be densely populated in which of the following areas?
   I. Flat, lowland plains
   II. Predominantly subsistence farming areas
   III. Regions with intensive farming
   IV. Deep humus-filled land
   (A) I and II only
   (B) I and III only
   (C) I, II and IV only
   (D) II, III and IV only

Item 25 refers to the demographic statistics provided below.

**Demographic Statistics for Country X**

Population in 2007: 5,273,196
Population growth for 2008: 2.4%
Population growth for 2009: 2.5%

25. Using the information above, calculate the population of Country X in 2009.
   (A) 5,399,753
   (B) 5,405,026
   (C) 5,531,583
   (D) 5,534,746
Item 26 refers to the following population pyramid of Japan in 2002.

26. Which of the following statements BEST describes the information shown in the population pyramid?

(A) There is a high birth rate and a high death rate.
(B) More males live to an older age than females.
(C) Fertility is high as women are having more children.
(D) There is a low death rate and a falling birth rate.

27. The use of substitutes may help to reduce the environmental impacts of overexploitation by

(A) reducing pollution
(B) reducing the demand for a particular resource
(C) increasing revenue from the sale of substitutes
(D) reducing the cost of exploitation of a particular resource
Items 28 – 29 refers to the diagrams I - IV below which represent the age structure of four different countries.

28. Which diagram shows a population with a constant growth rate?
   (A) I  
   (B) II 
   (C) III 
   (D) IV

29. Which diagram represents a population with the LEAST number of its people in the post-reproductive group?
   (A) I  
   (B) II 
   (C) III 
   (D) IV

Item 30 refers to the table below which shows the immigration and emigration statistics for four countries.

<table>
<thead>
<tr>
<th>Country</th>
<th>Immigration per 1000</th>
<th>Emigration per 1000</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>25</td>
<td>18</td>
</tr>
<tr>
<td>II</td>
<td>40</td>
<td>30</td>
</tr>
<tr>
<td>III</td>
<td>10</td>
<td>20</td>
</tr>
<tr>
<td>IV</td>
<td>20</td>
<td>5</td>
</tr>
</tbody>
</table>

30. Which of the above countries has a negative net migration?
   (A) I and III only 
   (B) I, II and IV only 
   (C) I, III and IV only 
   (D) II, III and IV only

31. The MAJOR natural resource found in Trinidad is
   (A) oil 
   (B) gold 
   (C) bauxite 
   (D) iron ore

32. Which of the following BEST describes the importance of an Environmental Impact Assessment (EIA)?
   (A) It is a legal requirement. 
   (B) It provides the costing for a proposed project. 
   (C) It must be done for the government’s projects only. 
   (D) It examines the environmental feasibility of a project.
33. Which of the following can be described as a renewable resource?
   (A) Asphalt  
   (B) Beaches  
   (C) Minerals  
   (D) Mangrove forests

34. The international convention, commonly known as the Kyoto Protocol is
   (A) CITIES  
   (B) UNCBD  
   (C) UNFCCC  
   (D) MARPOL

35. Which of the countries above possesses large reserves of limestone as a natural resource?
   (A) Jamaica  
   (B) Barbados  
   (C) Guyana  
   (D) Trinidad and Tobago

36. Which of the countries above possesses large expanses of virgin forests?

37. Mangroves are considered ecologically important because
   (A) they add aesthetic value  
   (B) they provide employment  
   (C) the roots perform important functions  
   (D) they are used for recreational purposes

Items 38 – 39 refer to the following terms:
   (A) Quarrying  
   (B) Animal husbandry  
   (C) Ecotourism  
   (D) Agriculture

38. Which of the above activities may result in heavy metal contamination of water?

39. Which activity would result in the water being polluted by faecal coliform?

40. Which of the following is the BEST reason for the conservation of rainforests?
   (A) They have aesthetic value.  
   (B) They provide employment.  
   (C) They are a source of fuel wood.  
   (D) They are a habitat for many organisms.

41. Fires have destroyed many forested areas around the Caribbean. In some cases, pine trees are planted to replace the natural forest since pine trees grow faster and are more fire resistant than many native trees.

Which term BEST describes this approach to resource management?
   (A) Restoration  
   (B) Preservation  
   (C) Rehabilitation  
   (D) In-situ conservation
Item 42 refers to the graph below which shows how total fish catch varies with fishing effort.

![Graph showing total fish catch versus fishing effort]

42. Which point on the x-axis indicates the level of effort which will produce the OPTIMUM sustainable yield?

Items 43 – 44 refer to the graph below which shows the annual income distribution for a Caribbean country.

![Bar chart showing annual income distribution]

43. What is the total income of this Caribbean country?

(A) 45 million
(B) 46 million
(C) 450 million
(D) 460 million

44. What is the percentage income from non-consumptive use of natural resources?

(A) 9.8
(B) 16.9
(C) 26.7
(D) 38.7

Item 45 refers to the table below which shows per capita meat consumption for selected countries.

<table>
<thead>
<tr>
<th>Country</th>
<th>Beef (kg)</th>
<th>Pork (kg)</th>
<th>Poultry (kg)</th>
<th>Mutton (kg)</th>
</tr>
</thead>
<tbody>
<tr>
<td>India</td>
<td>1</td>
<td>0.4</td>
<td>1</td>
<td>1</td>
</tr>
<tr>
<td>China</td>
<td>4</td>
<td>30</td>
<td>6</td>
<td>2</td>
</tr>
<tr>
<td>Italy</td>

<td>33</td>
<td>19</td>
<td>2</td>
</tr>
<tr>
<td>United States</td>
<td>45</td>
<td>31</td>
<td>46</td>
<td>1</td>
</tr>
</tbody>
</table>

45. Using the data in the table above, determine which of the following statements is true?

(A) The most populated countries consume the most meat.
(B) The least populated countries consume the most meat.
(C) More economically developed countries consume the most meat.
(D) Less economically developed countries consume the most meat.
CARIBBEAN EXAMINATIONS COUNCIL

ADVANCED PROFICIENCY EXAMINATION

ENVIRONMENTAL SCIENCE

UNIT 1: ECOLOGY, HUMAN POPULATION AND NATURAL RESOURCES

SPECIMEN PAPER

PAPER 02

2 hours 30 minutes

INSTRUCTIONS TO CANDIDATES

1. Do NOT open this examination paper until instructed to do so.

2. This paper consists of SIX questions, TWO from each Module.

3. Answer ALL questions.

4. Write your answers in the answer booklet provided.

5. You may use a silent, non-programmable, scientific calculator.
MODULE 1

Answer BOTH Questions.

I. Table 1 presents the species abundance of three species, X, Y, and Z, in two ecosystems, A and B.

<table>
<thead>
<tr>
<th>Ecosystem</th>
<th>Species Abundance</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>X</td>
</tr>
<tr>
<td>A</td>
<td>9</td>
</tr>
<tr>
<td>B</td>
<td>11</td>
</tr>
</tbody>
</table>

(a) Define EACH of the following:
(i) Ecosystem
(ii) Ecosystem stability

(b) Using the information in Table 1, calculate the species diversity for ecosystem A and ecosystem B.

(c) Explain the relationship between species diversity and ecosystem stability.

(d)(i) Species X, Y and Z are non-moving organisms. Describe a named method which is appropriate for sampling these organisms.

(d)(ii) State ONE limitation of the method described in (d)(i).

Total 20 marks
2(a) Figure 1 illustrates the cycling of matter through an ecosystem.

Figure 1. Cycling of matter through an ecosystem

(i) Name ONE decomposer. (1 mark)

(ii) Outline the importance of the decomposer in the cycling of matter illustrated in Figure 1. (2 marks)

(b) Describe TWO ways in which human activities can disrupt the integrity of natural ecosystems. (8 marks)

(c) With reference to any named ecosystem, construct a food web to show the feeding relationships between the organisms. (4 marks)

(d) The table below shows the number of organisms in a community.

<table>
<thead>
<tr>
<th>Organism</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mango trees</td>
<td>5</td>
</tr>
<tr>
<td>Caterpillars</td>
<td>60</td>
</tr>
<tr>
<td>Small birds</td>
<td>10</td>
</tr>
<tr>
<td>Hawks</td>
<td>5</td>
</tr>
</tbody>
</table>

Use the information in the table to construct a pyramid of numbers. (5 marks)

Total 20 marks
3. Table 2 presents data on world population size in 1990 and the estimated size for 2020.

**TABLE 2: WORLD POPULATION SIZE**

<table>
<thead>
<tr>
<th></th>
<th>More Developed Countries (millions)</th>
<th>Less Developed Countries (millions)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Population in 1990</td>
<td>1247</td>
<td>4486</td>
</tr>
<tr>
<td>Estimated Population in 2020</td>
<td>1375</td>
<td>6548</td>
</tr>
</tbody>
</table>

(a) Calculate the estimated percentage growth in world population attributable to Less Developed Countries between 1990 and 2020.  

(b) Explain why this estimated growth in the population of Less Developed Countries should be a cause for concern.  

(c) State THREE environmental impacts that could be associated with the percentage growth estimated in 3(a).  

(d) Select any TWO environmental impacts you stated in (c) above and suggest TWO measures that may be taken to mitigate EACH impact.  

Total 20 marks
4(a) Explain how culture influences the rate of growth of a population. (2 marks)

(b) Table 3 shows the Human Development Index (HDI) of two countries for 2007.

**TABLE 3: HUMAN DEVELOPMENT INDEX**

<table>
<thead>
<tr>
<th>Country</th>
<th>HDI</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>0.89</td>
</tr>
<tr>
<td>B</td>
<td>0.38</td>
</tr>
</tbody>
</table>

State THREE deductions that may be made regarding the relative achievements of BOTH countries based on their HDI presented in Table 3. (6 marks)

(c) Table 4 shows the total fertility rates for high and low income level countries.

**TABLE 4: FERTILITY RATES**

<table>
<thead>
<tr>
<th>Year</th>
<th>High Income</th>
<th>Low Income</th>
</tr>
</thead>
<tbody>
<tr>
<td>1965</td>
<td>5.8</td>
<td>7.5</td>
</tr>
<tr>
<td>1990</td>
<td>3.6</td>
<td>5.1</td>
</tr>
<tr>
<td>2000</td>
<td>2.1</td>
<td>4.6</td>
</tr>
</tbody>
</table>

(i) Define the term ‘fertility rate’. (1 mark)

(ii) Draw a graph to illustrate the information provided in the table. (5 marks)

(ii) State THREE conclusions (inferences) that can be made from the graph drawn in (c)(ii) above. (6 marks)

Total 20 marks
MODULE 3

Answer BOTH questions.

5(a) With reference to suitable examples, distinguish between ‘consumptive use’ and ‘non-consumptive use’ of natural resources. (3 marks)

(b) The graph below shows the changes in the quantities of two natural resources, A and B, over a ten-year period.

![Graph showing changes in quantities of resources A and B over ten years.](image)

**Figure 2. Quantities of two natural resources A, and B, over a ten-year period**

(i) Using actual values from the graph, describe the trend in the quantity of resource B over the ten-year period. (5 marks)

(ii) From the graph drawn, identify the resource which is non-renewable and the resource which is renewable. (2 marks)

(iii) Justify your answer in b (ii). (7 marks)

(c) Suggest THREE ways by which the non-renewable resource can be conserved. (3 marks)

Total 20 marks
6(a) State THREE functions of coral reef ecosystems in the Caribbean. (3 marks)

(b) Explain how ANY THREE human activities impact on coral reef ecosystems in the Caribbean. (6 marks)

(c) The table below gives the percentage coral reef cover and the percentage fishable resources for the south coast of an island between 1995 and 2005.

**TABLE 5: PERCENTAGE CORAL REEF COVER AND PERCENTAGE FISHABLE RESOURCES**

<table>
<thead>
<tr>
<th>Yr</th>
<th>% Coral Reef Cover</th>
<th>% Fishable Resource</th>

<tr>
<td>2001</td>
<td>12</td>
<td>47</td>
</tr>
<tr>
<td>2002</td>
<td>8</td>
<td>41</td>
</tr>
<tr>
<td>2003</td>
<td>15</td>
<td>32</td>
</tr>
<tr>
<td>2004</td>
<td>21</td>
<td>30</td>
</tr>
<tr>
<td>2005</td>
<td>27</td>
<td>38</td>
</tr>
</tbody>
</table>

(i) Plot a graph to show the information in the table. (5 marks)

(ii) Use the graph to determine the time lag between reef degradation and the collapse of the fishable resources and give ONE reason for the time lag. (2 marks)

(iii) Suggest TWO reasons for improvement in fishable resources associated with the recovery in coral reef ecosystems. (4 marks)

Total 20 marks

ENVIRONMENTAL SCIENCE
UNIT 1: ECOLOGY, HUMAN POPULATION AND NATURAL RESOURCES

SPECIMEN PAPER
PAPER 03/2
2 hours

INSTRUCTIONS TO CANDIDATES

1. This paper consists of THREE questions.
2. Answer ALL questions.
3. Write your answers in the answer booklet provided.
4. Graph paper is provided.
5. You may use a silent, non-programmable, scientific calculator

Copyright © 2009 Caribbean Examinations Council®
All rights reserved.
Answer ALL questions.

Read the paragraph below and answer the questions that follow.

A forest concession was granted to a timber company to harvest timber for a period of thirty years. The concession was granted on the condition that the species of a tree lizard endemic to the area was protected. The university in the country was asked by the company to monitor the lizard population for the duration of the operation of the concession. The university was also required to make recommendations for the conservation and protection of the lizard population.

Table 1 presents the results of monitoring the lizard population for the last ten years of the concession.

### TABLE 1: LIZARD POPULATION OVER TEN-YEAR PERIOD

<table>
<thead>
<tr>
<th>Year</th>
<th>Lizard Population</th>
</tr>
</thead>
<tbody>
<tr>
<td>1996</td>
<td>170</td>
</tr>
<tr>
<td>1997</td>
<td>130</td>

</tr>
</tbody>
</table>
The mark-release-recapture method was used to collect the data presented in Table 1.

(a) Why is this method suitable for the lizard population? (3 marks)

(b) Outline the mark-release-recapture method for collecting the data presented in Table 1. (7 marks)

(c) State TWO assumptions that must be made when using the mark-release-recapture method to estimate population size. (4 marks)

(d) Describe FOUR steps of a monitoring plan to track the lizard population. State ONE objective for EACH step described. (8 marks)

(e) Use the information in Table 1 to plot an appropriate graph showing the variation in the lizard population during the period 1996 – 2005. (8 marks)

Total 30 marks

2. Figure 1 shows the age structure diagram for a country. The fertility rate of the country is at replacement level and its population size is 56.6 million.

![Figure 1. Age structure diagram](image-url)
(a) State what is meant by the terms
   (i) fertility rate
   (ii) replacement fertility rate.  

(4 marks)

(b) Use the diagram to calculate
   (i) the number of people in the 41 – 60 age group  

(5 marks)

   (ii) the percentage of the population in the pre-reproductive years.  

(7 marks)

(c) (i) How is the population of the country expected to change over the next ten years?  

(1 mark)

   (ii) Justify your answer in (c) (i).  

(4 marks)

(d) Explain how EACH of the following factors may affect fertility rates:
   (i) Educational opportunities
   (ii) Social and economic status of women
   (iii) Family planning services  

(9 marks)

Total 30 marks
Figure 2 shows the effect of increased harvesting effort (number of fishing boats) on the daily fish catch.
(a) (i) Describe the trend observed in Figure 2. (8 marks)
(ii) Using the graph, determine what fishing effort will produce a daily catch of 3500 kg of fish. (2 marks)

(b) (i) What is meant by the term ‘maximum sustainable yield (MSY)’ in relation to the harvesting of the fishing stock? (2 marks)
(ii) At which of the three points, A, B or C, shown on Figure 2 should harvesting take place to achieve the maximum sustainable yield? (1 mark)
(iii) Give THREE reasons why it is best to harvest the fishing resource at the MSY. (6 marks)

(c) Explain the effect of EACH of the following on the harvesting of the fishing resource in Figure 2:

(i) Population growth

(ii) Level of environmental awareness (6 marks)

(d) (i) Recommend ONE conservation measure that may be used to improve the status of the fishing resource. (1 mark)
(ii) Give TWO reasons for the recommendation provided in (d)(i). (4 marks)

Total 30 marks

END OF TEST
READ THE FOLLOWING INSTRUCTIONS CAREFULLY.

1. This test consists of 45 items. You will have 90 minutes to answer them.

2. In addition to this test booklet, you should have an answer sheet.

3. Do not be concerned that the answer sheet provides spaces for more answers than there are items in this test.

4. Each item in this test has four suggested answers lettered (A), (B), (C), (D). Read each item you are about to answer and decide which choice is best.

5. On your answer sheet, find the number which corresponds to your item and shade the space having the same letter as the answer you have chosen. Look at the sample item below.

Sample Item

Suspended particles in water cause

Sample Answer

(A) acidity
(B) alkalinity
(C) salinity
(D) turbidity

The best answer to this item is “turbidity”, so answer space (D) has been shaded.

6. If you want to change your answer, erase it completely before you fill in your new choice.

7. When you are told to begin, turn the page and work as quickly and as carefully as you can. If you cannot answer an item, omit it and go on to the next one. You may return to the omitted item later. Your score will be the total number of correct answers.

8. You may use a silent electronic calculator.

DO NOT TURN THIS PAGE UNTIL YOU ARE TOLD TO DO SO.
1. Which of the following may cause soil degradation?

I. Leaching  
II. Strip farming  
III. Water logging  
IV. Mono-culture farming

(A) I and II only  
(B) I, II and III only  
(C) I, III and IV only  
(D) I, II, III and IV

2. Which of the following BEST describes subsistence farming?

(A) Large scale for profit  
(B) Providing just enough for the farmer’s own family  
(C) Involving large amounts of inputs for example, fertilisers  
(D) Involving few people and large amounts of land

3. Which of the following are effects of the continuous use of fertilisers?

I. Few organisms in the soil  
II. Reduced soil humus content  
III. Poor crumb structure of soil  
IV. Decreased soil mineral content

(A) I and II only  
(B) I and III only  
(C) I, II and III only  
(D) I, II, III and IV

4. Which method of increasing soil fertility has the GREATEST environmental impact?

(A) Adding cow manure to the soil  
(B) Ploughing a cover crop into the soil  
(C) Planting pigeon peas between rows of other crops  
(D) Adding inorganic fertiliser to the soil

5. The farming of ocean fish is BEST described as

(A) apiculture  
(B) aeroponics  
(C) mariculture  
(D) hydroponics

6. Which of the following are environmentally sustainable agricultural practices?

I. Agro-forestry  
II. Contour farming  
III. Integrated pest management  
IV. Mono-culture farming

(A) I and III only  
(B) I, II and III only  
(C) I, II and IV only  
(D) I, II, III and IV

7. Agriculture plays an important role in the economies of various countries. Which of the following are the MOST important economic roles played by agriculture?

I. Provides form of food security  
II. Contributes to Gross Domestic Product (GDP)  
III. Provides opportunity for scientific research  
IV. Attracts foreign exchange

(A) I, II and III only  
(B) I, II and IV only  
(C) I, III and IV only  
(D) II, III and IV only
8. Which of the following are DISADVANTAGES of aquaculture?

I. Large output of polluted water
II. High yield in small volume of water
III. Large inputs of land, feed and water needed
IV. Dense population vulnerable to disease

(A) I and II only
(B) I, II and III only
(C) I, III and IV only
(D) I, II, III and IV

9. Which of the following may be used in a programme of integrated pest management?

I. Introduction of a non-native ladybird which eats the pest
II. Occasional spraying of broad-spectrum pesticides
III. Planting of non-crop plants between crops
IV. Use of genetically engineered crops to resist disease

(A) I, II and III only
(B) I, II and IV only
(C) I, III and IV only
(D) II, III and IV only

10. For the year 1970, the difference in fertiliser consumption between Jamaica and Guyana is approximately

(A) 30 kg/hectare
(B) 50 kg/hectare
(C) 70 kg/hectare
(D) 100 kg/hectare

11. Which of the following statements is correct?

(A) For the period 1990 - 2000, fertiliser consumption is higher for Jamaica than for Guyana.
(B) For the period 1990-2000, fertiliser consumption for both countries is directly proportionate.
(C) For the period 1990-2000, fertiliser consumption for both countries is the same.
(D) For the period 1990-2000, fertiliser consumption is higher for Guyana than for Jamaica.

12. Which of the following processes may be linked to the sharp increase in fertiliser consumption for Jamaica in the 1980s?

(A) Salinisation
(B) Soil erosion
(C) Water logging
(D) Eutrophication
13. Winkler’s Test is commonly used when determining the effect of
   (A) salinisation
   (B) fertiliser run-off
   (C) soil degradation
   (D) heavy metal contamination

14. In the 1960s the ‘Green Revolution’ involved the widespread application of increased mechanisation, pesticide and fertiliser use, a general increase in farm size and widespread use of high-yield crop varieties. Which of the following are likely to be consequences of the ‘Green Revolution’?
   I. An increase in food production
   II. A long-term decrease in pest activity
   III. A long-term decrease in soil quality
   IV. An increase in agricultural biodiversity
   (A) I and II only
   (B) I and III only
   (C) II and IV only
   (D) III and IV only

15. Which of the following is a likely disadvantage of the use of genetic engineering in agriculture?
   (A) Increased dependence on agrochemicals
   (B) Increased need for mechanisation on farms
   (C) Unanticipated ecological effects on natural ecosystems
   (D) More time is needed for the production of results

16. Which of the following is an example of a renewable energy source?
   (A) Coal
   (B) Fossil fuel
   (C) Nuclear energy
   (D) Geothermal energy

17. The energy that matter has because of its mass and velocity is
   (A) kinetic
   (B) nuclear
   (C) potential
   (D) chemical

18. The part labelled P is the
   (A) generator
   (B) drive shaft
   (C) rotor blade
   (D) electrical cable
19. Which of the following actions can increase the energy efficiency of a building?
   I. Aligning building to maximise air flow
   II. Using central air conditioning
   III. Having large glass windows
   IV. Using light coloured paints on the wall

   (A) I and III only
   (B) III and IV only
   (C) I, III and IV only
   (D) I, II, III and IV

20. Which of the following are potential environmental impacts of wind energy?
   I. Bird kills
   II. Noise pollution
   III. Water pollution
   IV. Loss of biodiversity

   (A) I, II and III only
   (B) I, II and IV only
   (C) I, III and IV only
   (D) I, II, III and IV

21. In the Caribbean, many islands rely on the importation of fossil fuels to generate electricity for domestic and industrial use. The cost attached to this importation of fuel can be classified as

   (A) social
   (B) regional
   (C) political
   (D) economic

22. Which of the following energy conversions shows the conversion of energy in the production of electricity from crude oil?

   (A) Chemical → mechanical → heat → electrical
   (B) Chemical → heat → mechanical → electrical
   (C) Heat → chemical → mechanical → electrical
   (D) Mechanical → light → heat → electrical

23. Which of the following may be done in the home to help conserve energy?

   I. Turn off the light when not in the room.
   II. Unplug cell phone chargers and other devices when not in use.
   III. Leave on the tap while brushing your teeth.
   IV. Do not turn off the computer because it uses more energy on start up.

   (A) I and II only
   (B) I and III only
   (C) II and IV only
   (D) III and IV only

24. Which of the following may be adopted to promote the use of hybrid vehicles (a vehicle which uses alternative energy sources) in the Caribbean?

   I. Charge no import duty on hybrid vehicles
   II. Increase taxes on fuel for traditional vehicles
   III. Increase taxes on gas and diesel engine vehicles
   IV. Upgrade and increase the existing fuel stations to accommodate hybrid vehicles

   (A) I and IV only
   (B) I, II and IV only
   (C) I, III and IV only
   (D) I, II, III and IV
Items 25 - 26 refer to the diagram below which shows the energy conversion in a car’s engine.

80 kW from fuel → 16 kW used to run the vehicle (accessories/transmission/axle) → 64 kW

25. The energy efficiency of the engine is
   (A) 20%
   (B) 50%
   (C) 70%
   (D) 100%

26. The remaining 64 kW is
   (A) used for braking
   (B) lost as heat energy
   (C) used for water cooling
   (D) re-circulated into the engine

27. Water stored in a dam is an example of
   (A) solar energy
   (B) water energy
   (C) kinetic energy
   (D) potential energy

Item 28 refers to the following pie chart which represents global primary energy supply.

- Hydro: 2.2%
- Combustible renewables and waste: 10.9%
- Nuclear: 6.9%
- Coal: 23.3%
- Other: 0.5%
- Natural gas: 21.2%
- Oil: 35.0%

28. The total percentage of global energy supplied by fossil fuels is
   (A) 21.2%
   (B) 35.0%
   (C) 69.2%
   (D) 79.5%

Item 29 refers to the graph below which shows the number of Industrial plants in five Caribbean countries.

29. Based on the graph, which Caribbean country will have the GREATEST demand for electricity?
   (A) Guyana
   (B) Jamaica
   (C) Barbados
   (D) Trinidad & Tobago
30. The diagram shows the essential features of

(A) a fuel cell
(B) an electric motor
(C) a nuclear fusion reactor
(D) a nuclear fission reactor

31. The BEST example of a point source of water pollution is

(A) storm water
(B) factory effluent
(C) acid precipitation
(D) agricultural run-off

32. Ozone, O₃, is

(A) a primary air pollutant in the troposphere
(B) a secondary air pollutant in the troposphere
(C) a primary air pollutant in the stratosphere
(D) a secondary air pollutant in the stratosphere

33. Which international agreement was designed to protect the ozone layer?

(A) Kyoto Protocol
(B) Montreal Protocol
(C) Basel Convention
(D) Cartagena Convention

34. The equations above BEST describe the

(A) greenhouse effect
(B) process of oxidation
(C) process of carbonation
(D) destruction of the ozone layer

35. On which of the following does the toxicity of a substance depend?

I. The amount of the substance the person has ingested, inhaled or absorbed through the skin
II. How frequently the person is exposed to the substance
III. The genetic make-up of an individual
IV. The percentage of individuals in the population who are affected by the chemical substance

(A) I and III only
(B) I, II and III only
(C) I, II and IV only
(D) I, III and IV only

36. A synergistic interaction

(A) either decreases or multiplies the harmful effect of a toxin
(B) is an immediate or rapid harmful reaction to an exposure
(C) reduces the harmful effect of a toxin
(D) multiplies the harmful effect of a toxin
37. Which of the following activities may result in an increase in pollution?

I. Individual  
II. Recreational  
III. Festival  
IV. Tourism

(A) I and II only  
(B) II and III only  
(C) I, II and III only  
(D) I, II, III and IV

38. Which of the following should be considered when disposing hazardous waste?

I. Security of disposal site  
II. Methods of transporting the waste to disposal site  
III. Weight of the hazardous waste  
IV. Geological activity

(A) I, II and III only  
(B) I, II and IV only  
(C) II, III and IV only  
(D) I, II, III and IV

Items 39 - 40 refer to the diagram below showing a section of a village with locations labelled (A), (B), (C) and (D).

![Diagram](image)

39. Which location on the diagram is the BEST location for a water treatment plant that produces potable water?

40. At which location on the diagram will the nitrates be in the HIGHEST concentration?
41. Mr James, a farmer, uses the river which runs through his property for irrigation. He suspects the water is being contaminated by raw sewage.

Which parameter will he have to monitor to determine if his suspicions are justified?

(A) Turbidity  
(B) Total nitrates  
(C) Faecal coliform  
(D) Total suspended solids

Items 42 - 43 refer to the graph below which shows the relationship between biochemical oxygen demand and dissolved oxygen concentrations in a river. P to S represents values for BOD and DO from samples at four different points along the river.

42. Which sample was MOST LIKELY taken from the active decomposition zone?

(A) P  
(B) Q  
(C) R  
(D) S

43. Which sample was MOST LIKELY taken from a point in the river closest to the pollution source?

(A) P  
(B) Q  
(C) R  
(D) S

44. The process shown in the diagram is

(A) bioremediation  
(B) biomagnification  
(C) bioaccumlation  
(D) phytoremediation

45. The concentration factor for the mercury pollutant in the food chain is

(A) 15  
(B) 325  
(C) 1 200  
(D) 12 000

Items 44 - 45 refer to the diagram below which shows an aquatic food chain with the mercury concentrations at each level.
CARIBBEAN EXAMINATIONS COUNCIL
ADVANCED PROFICIENCY EXAMINATION
ENVIRONMENTAL SCIENCE
UNIT 2: AGRICULTURE, ENERGY AND ENVIRONMENTAL POLLUTION

SPECIMEN PAPER
PAPER 02

2 hours 30 minutes

INSTRUCTIONS TO CANDIDATES

1. Do NOT open this examination paper until instructed to do so.
2. This paper consists of SIX questions, TWO from each Module.
3. Answer ALL questions.
4. Write your answers in the answer booklet provided.
5. You may use a silent, non-programmable, scientific calculator.

Copyright © 2009 Caribbean Examinations Council®
All rights reserved.

02220020/ SPEC/ 2010
MODULE 1

Answer BOTH questions.

1. Figure 1 shows the agricultural yield from a farm when inorganic fertilisers and organic fertilisers are used.

![Graph showing yield and type of fertiliser used](image)

**Figure 1. Yield and type of fertiliser used**

(a) With reference to Figure 1, state FIVE deductions that can be made about the agricultural yield from the farm. (5 marks)

(b) Distinguish between ‘organic fertilisers’ and ‘inorganic fertilisers’. (3 marks)

(c) Discuss why, in spite of the trend shown in Figure 1, farmers are still being encouraged to increase their use of organic fertilisers over inorganic fertilisers. Include SIX points in your response. (12 marks)

Total 20 marks
2. Hillside farming has been a common occurrence for years in Toco Village. Recently residents of the village have observed increased cases of soil erosion and degradation of the water quality. Farmers have been planting the same crops for years and have complained of decreased yields and increased pest infestation.

(a) Residents in Toco Village were told by the agricultural extension officer that their farming practices were responsible for the increased cases of soil erosion and water quality degradation.

Explain why the officer said this to the residents. \(6\) marks

(b) Farmers in Toco Village were advised to practise crop rotation in an effort to improve yields and reduce the problems caused by pest infestation.

Justify the advice given. \(6\) marks

(c) (i) Name ONE soil conservation method that is appropriate for the farmers in Toco Village. \(1\) mark

(ii) BRIEFLY describe the method named in (c)(i) above. \(2\) marks

(d) The turbidity of the river in Toco Village was monitored from 1990 – 2000. The table below provides the information collected.

**TABLE 1: RESULTS OF WATER QUALITY MONITORING**

<table>
<thead>
<tr>
<th>Year</th>
<th>Turbidity</th>
</tr>
</thead>
<tbody>
<tr>
<td>1990</td>
<td>5.5</td>
</tr>
<tr>
<td>1992</td>
<td>9.0</td>
</tr>
<tr>
<td>1994</td>
<td>27.2</td>
</tr>
<tr>
<td>1996</td>
<td>29.2</td>
</tr>
<tr>
<td>1998</td>
<td>16.4</td>
</tr>
<tr>
<td>2000</td>
<td>10.2</td>
</tr>
</tbody>
</table>

(i) Plot a graph to illustrate the information provided in the table. \(4\) marks

(ii) The farmers implemented the soil conservation method identified in (c)(i) during this period. In what year was this method implemented? \(1\) mark

Total 20 marks
MODULE 2

Answer BOTH questions.

3. (a) Outline the process by which fossil fuels are formed. (2 marks)

(b) Figure 2 shows the annual consumption of fossil fuels by developing countries in 1990, 2000, 2003.

![Figure 2. Annual consumption of fossil fuels by developing countries](image)

(i) Compare the annual consumption of fossil fuels over the three years. (5 marks)

(ii) Describe ONE environmental and ONE social impact on developing countries as a result of the consumption pattern indicated in Figure 2. (8 marks)

(c) (i) Define the term ‘demand management’ in relation to energy use. (1 mark)

(ii) Explain how ‘demand management’ can help to mitigate the impacts of fossil fuel consumption. (4 marks)

Total 20 marks
4. (a) Figure 3 below shows a hydroelectric power plant.

![Hydroelectric power plant diagram]

Figure 3. Hydroelectric power plant

(a) Describe the energy conversion process occurring in the hydroelectric power plant, making clear in your description the meaning of the terms ‘potential energy’ and ‘kinetic energy’.  

(4 marks)

(b) State TWO advantages and ONE disadvantage of hydroelectric power generation.  

(3 marks)

(c) Assess the suitability of (i) hydroelectricity AND (ii) solar energy to adequately meet the energy needs of developing countries.  

(8 marks)
(d) The data below represent the percentage use of various types of energy in the world.

<table>
<thead>
<tr>
<th>Type of Energy</th>
<th>Percentage Use</th>
</tr>
</thead>
<tbody>
<tr>
<td>Biomass</td>
<td>11.0</td>
</tr>
<tr>
<td>Coal</td>
<td>22.0</td>
</tr>
<tr>
<td>Geothermal, solar, wind</td>
<td>2.5</td>
</tr>
<tr>
<td>Hydropower</td>
<td>4.5</td>
</tr>
<tr>
<td>Natural gas</td>
<td>21.0</td>
</tr>
<tr>
<td>Nuclear</td>
<td>6.0</td>
</tr>
<tr>
<td>Oil</td>
<td>33.0</td>
</tr>
</tbody>
</table>

(i) Plot a bar graph to illustrate the data in the table. (4 marks)

(ii) What percentage of commercial energy used in the world is renewable? (1 mark)

Total 20 marks
MODULE 3

Answer BOTH questions.

5. Table 2 presents results from a monitoring programme to determine levels of the pesticide dieldrin present in an aquatic ecosystem. The pesticide concentration was measured in each organism that formed a part of a complete food chain.

**TABLE 2: CONCENTRATION OF DIELDRIN IN AQUATIC ECOSYSTEM**

<table>
<thead>
<tr>
<th>Category of Organism</th>
<th>Organism</th>
<th>Dieldrin Concentration (ppm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Producers</td>
<td>Algae, aquatic plant</td>
<td>0.05</td>
</tr>
<tr>
<td>Primary consumers</td>
<td>Small fish</td>
<td>0.3 – 1.2</td>
</tr>
<tr>
<td>Secondary consumers</td>
<td>Large fish</td>
<td>1.4 – 2.6</td>
</tr>
<tr>
<td>Tertiary consumers</td>
<td>Large bird</td>
<td>4.0 – 6.0</td>
</tr>
</tbody>
</table>

Concentration of dieldrin in water = 0.0002 ppm

(a) State FIVE inferences that may be drawn from the data presented in Table 2.

(b) Outline ONE environmental pathway of the pesticide.

(c) Account for the difference in dieldrin concentration in the organisms presented in Table 2.

(d) Describe TWO characteristics of pesticides that account for their environmental impact.

Total 20 marks
6. Figure 4 shows the solid waste composition for a Caribbean country in 1998 and 2007.

![Pie charts showing solid waste composition for 1998 and 2007](image)

Figure 4. Solid waste composition for a Caribbean country, 1998 and 2007

(a) (i) State TWO major changes in the composition of solid waste between 1998 and 2007. 

(ii) Explain the environmental significance of ONE of the changes in (i) above. 

(iii) Which solid waste is the same in both years? 

(b) Outline TWO reasons for the change in the composition of solid waste between 1998 and 2007. 

(c) (i) What is meant by the term ‘recycling’? 

(ii) Name ONE type of waste that can be recycled. 

(d) Caribbean countries are proposing recycling programmes for minimising the volume of solid waste which they produce. Discuss FOUR advantages and FOUR disadvantages of these programmes. 

Total 20 marks

END OF TEST
INSTRUCTIONS TO CANDIDATES

1. This paper consists of THREE questions.
2. Answer ALL questions.
3. Write your answers in the answer booklet provided.
4. Graph paper is provided.
5. You may use a silent, non-programmable, scientific calculator.
Answer ALL questions.

Read the paragraph below and answer the questions that follow.

Tropic Farm has been in operation since 1970 producing bananas for the export market. Tropic Farm is located in the same region as the rural community of Maka Bush. Residents of this community depend on water from the Rio Minho River for domestic use. In 1995, Tropic Farm increased its production of bananas for the export market. Residents of Maka Bush claim that since 1995, the quality of the water in the Rio Minho has deteriorated.

Table 1 presents production data from Tropic Farm for the years 1993 to 2007 while Figure 1 shows average annual nitrate concentration in the Rio Minho River from 1992 to 2007.

**TABLE 1: ANNUAL PRODUCTION OF BANANAS**

<table>
<thead>
<tr>

<tr>
<td>2007</td>
<td>4000</td>
</tr>
</tbody>
</table>
Figure 1. Nitrate concentration in the Rio Minho River

1. (a) Use the information in Table 1 to plot an appropriate graph showing the annual production of bananas by Tropic Farm from 1993 to 2007. (12 marks)

(b) Describe the trend in the

(i) banana production between 1993 and 2007 (4 marks)

(ii) nitrate concentration from 1992 to 2007 (4 marks)

(c) Calculate the rate of increase of the nitrate concentration from 1995 to 2000. (3 marks)

(d) What evidence is there from the graph in Figure 1 to support the claim that the water quality of the Rio Minho has deteriorated? (4 marks)

(e) Outline ONE possible environmental pathway of nitrates from the farm to the river. (3 marks)

Total 30 marks
2. (a) As part of its development drive, the national government has decided to invest in a hydroelectric power project on the Rio Minho River.

(i) Hydroelectric energy can be classed as a type of indirect solar energy. State TWO other energy sources that can also be placed in the same class. (2 marks)

(ii) Describe how a hydroelectric power plant works. (4 marks)

(b) The residents of Maka Bush have received letters informing them of the planned development and clearly outlining the advantages of hydroelectric power to the nation.

(i) Provide FOUR advantages of hydroelectric power. (4 marks)

(ii) However, the residents of Maka Bush are very concerned about the possible negative impacts of this planned development, and take their concerns to the capital. Suggest FOUR concerns that the people in Maka Bush may have. (4 marks)

(c) Having heard the concerns of the Maka Bush and other residents from the area, the national government provides some data on hydropower in the Caribbean to encourage the residents to get on board with the project. This data is provided in Table 2 below.

**TABLE 2. GENERATION OF ELECTRICITY BY HYDROPOWER IN THE CARIBBEAN IN 2007**

</tbody>
</table>

(i) Plot a bar graph to illustrate the data in Table 2, using ONLY the data for the countries with actual hydropower generation capability. (10 marks)
(ii) Describe the trend in electricity generation by hydropower in the Caribbean.  
(3 marks)

(iii) What percentage of the electricity generated by hydropower was produced by Belize and St. Vincent and The Grenadines in 2007?  
(3 marks)

3. (a) Outline THREE reasons why it is necessary to monitor the water quality of water bodies.  
(3 marks)

(b) (i) Identify THREE parameters, excluding nitrates, that should be measured in a programme to monitor the water quality of the Rio Minho River.  
(3 marks)

(ii) Justify your choice of parameters to be measured in 3 (b)(i) above.  
(6 marks)

(c) Outline the procedure to test for THREE of these water quality parameters.  
(12 marks)

(d) (i) State THREE changes which may occur in a river ecosystem that has a high concentration of nitrates.  
(3 marks)

(ii) Give ONE reason for EACH change stated in (d)(i).  
(3 marks)

### Educational opportunities

- Women with higher educational backgrounds marry later (1), delaying the birth of their first child reducing their childbearing years (1).
- Educated women control their fertility by using contraceptives (1).

### Social and economic status

- In some societies women are not exposed to education (1) and other ways of uplifting their social status, evidence shows that this lack of social status (1) results in high fertility rates.
- In contrast women with social status have the education and means to control their fertility rates (1).

### Family Planning Services

- Provides information on reproductive physiology (1) and contraceptives (1)
- This information allows women to control fertility rate (1) by the use of fertility pills.

</table>
| 3 (a) (i) | 3.4 | • As the fishing effort increases the daily fish catch increases.  
• The increasing trend continues up to a fishing effort of 35 boats after which as fishing effort increases daily catch decreases.  
• The decreasing trend continues and reaches 0 when fishing effort is equal to 70 boats.  
• The maximum daily catch is 4500 kg of fish with 35 boats operating. | 2 marks for each point fully described.  
Partial description 1 mark. | 8 |
| 3 (a) (ii) | 3.4 | Fishing effort-25 boats. | | 2 |
| (b) (i) | 3.10 | MSY- The largest amount of a resource that can be harvested without causing a decline in the stock of the natural resource. | | 2 |
| (b) (ii) | 3.10 | Point B | | 1 |
| (b) (iii) | 3.10 | • Harvesting at B will allow the stock to be sustained since it will be easy for it to recover.  
• The minimum viable threshold will not be exceeded and the population will sustain its biomass.  
• There will be enough members left to reproduce, replenish and sustain the population. | 2 marks for each reason fully explained.  
1 mark for partial explanation. | 6 |
## Population growth (3 marks)
- Increased population growth means more people potentially demanding more fish resource.
- As demand increases greater fishing effort will be expended to harvest more fish.
- If the resource is not carefully managed this could lead to resource over-harvesting and resource decline.

## Level of environmental awareness (3 marks)
- People become more aware of the issues and the negative impacts of humans on natural resources.
- They become more inclined to practice resource harvesting and management techniques.
- This leads to more sustainable fishing efforts and better managed fish stocks.

## Develop protected areas
- Protected areas will allow some areas to be managed for conservation.
- It allows for the maintenance and rehabilitation of habitats.
- It restricts and manages threats to the resource.
- Activity close to the protected area is limited.
- Protected areas provide safe breeding and feeding areas.

SPECIMEN PAPER

Unit 2 – Paper 02

MARK SCHEME
### Deductions

- In both instances yield increased as the amount of fertilisers increased.
- The yield is consistently one ton greater when inorganic fertiliser is used as against organic fertiliser.
- The yield is consistently one ton less when organic fertiliser is used as against inorganic fertiliser.
- The rate of increase in yield is greater when organic fertilisers are used.
- The rate of increase in yield is less when inorganic fertilisers are used.
- It is more efficient in the long run to use organic fertilisers.

- Inorganic or ‘commercial’ fertilisers are manufactured, with the main ingredients being nitrate, phosphates and potassium.
- Organic fertilisers include materials such as animal manure, green manure and compost that are applied to cropland as a source of plant nutrients.
- Organic fertilisers are naturally occurring plant and animal materials that release nutrients slowly as they decompose.
- Organic fertilisers are complex and have variable compositions.
- Inorganic fertilisers are manufactured with specific components and concentrations.

### Instructions

</table>
| 1 (c)    | 1.3                | - Inorganic or commercial fertilisers are manufactured with the main ingredients being nitrate, phosphates ad potassium.  
- Inorganic fertilisers are expensive and farmers will therefore need to expend large amounts of money to acquire them in sufficient quantities.  
- Organic fertilisers are cheaper since they include materials that are usually considered waste materials on farms. They are also more readily available.  
- Inorganic fertilisers are soluble and immediately available to the plants but they are highly mobile and the nutrients are quickly leached out of the soil. Therefore farms will require regular inputs which increase costs.  
- Organic fertilisers are slow acting and long lasting since they release nutrients only upon decomposition.  
- Organic fertilisers are more environmentally friendly and are less of a pollution threat than are inorganic fertilisers. Inorganic fertilisers easily can contaminate ground water and surface waters leading to eutrophication of surface waters.  
- Organic fertilisers improve the soil structure by adding humus which increases the waterholding capacity as well as the soil microflora which are good for plant growth.  
- While the use of inorganic fertilisers may result in higher production in the short term, for long term sustainability, in terms of cost and environmental problems, it is better to use organic fertilisers. | Any SIX points fully discussed 2 marks each Partial discussion 1 mark each. | 12 |

EACH point 1 mark
Environmental impact

- **Acid rain**
  - Combustion of fossils fuels generates sulphur, nitrogen and carbon oxides.
  - These dissolve in precipitation and return to earth as sulphuric, carbonic and nitric acids.
  - These acids negatively impact natural ecosystems such as forest.
  - Built areas such as monuments and sculptures made of marble are particularly vulnerable.

- **Global warming**
  - Emissions of carbon dioxide from the combustion of fossil fuels are said to be the cause of the increased concentration of carbon dioxide in the troposphere.
  - This has led to an increased retention in solar energy in the atmosphere resulting in an increase in global temperatures called global warming.
  - Global warming has the potential to cause sea level to rise inundating coastal areas of many countries.
  - Other potential impacts of global warming include increase in the frequency and strengths of hurricanes, floods, droughts.

| 3 (b) (ii) Cont’d | | • Habitat destruction  
- Harvesting, processing and distributing fossil fuels can also create environmental problems  
- Coal mining methods, particularly strip mining and mountaintop removal, have been responsible for largescale habitat destruction.  
- Offshore drilling can create a hazard for aquatic organisms.  
- Oil spills on the ocean are responsible for the deaths of aquatic organisms and damage to miles of beaches.  
- Fossils fuels also contain radioactive material mainly uranium and thorium that are released into the atmosphere during burning. | | | |
| 3 (c) (i) | 2.7 | Social impact  
• Air Pollution  
- Years of exposure to air pollution can break down the body’s natural defenses causing or contributing to respiratory diseases such as lung cancer, asthma, chronic bronchitis and emphysema.  
- Elderly people, infants, pregnant women, and people with heart disease, (1) asthma or other respiratory diseases are especially vulnerable to air pollution.  
- Air pollution costs countries billions of dollars in health care costs and lost work productivity annually.  
- There are also many premature deaths each year as a result of pollution-related lung diseases.  
- Demand management refers to actions taken to influence the quantity or patterns of use of energy consumed by end users. | Identification of social impact

### Question 3 (c) (ii)

#### Syllabus Objective

2.7

#### Suggested Response

- Operators generally use the least expensive generating capacity at first to satisfy demand, and then use additional capacity from more expensive or inefficient plants as demand increases.

- If demand significantly exceeds generating capacity, the additional demand may be satisfied by building additional plants.

- Alternately management activities may be used to dampen demand in such a way that the current generating capacity can satisfy demand.

- Consumers could be encouraged to modify their usage pattern so that domestic demand does not coincide with industrial demand.

- Consumers could also be encouraged to use more efficient appliances such as fluorescent light bulbs decreasing overall demand.

- Effective demand management can prevent the building of additional power plants and the habitat destruction and emission associated with power plants.

| 4 (a)    | 2.1               | • The water has potential energy due to the difference in height of the water level at the intake pipe and the position of the turbine.  
• As the water flows down the intake pipe, its potential energy is converted to kinetic energy resulting in an increase in the speed of water.  
• As the water flows through the turbine it causes a coil to rotate in a magnetic field and the kinetic energy of the water is converted to the rotational energy of the coil.  
• The rotating coil generates a potential difference across the coil.  
• Thus the kinetic energy of the flowing water is converted into electrical energy which is a form of potential energy.                                                                                                                                                     |              | 4     |
| (b)      | 2.3               |                                                                                                                                                                                                                                                                                                                                                  |              |       |

Advantages

• Hydropower generation has a moderate to high net yield and fairly low operating and maintenance cost.  
• Hydropower plants rarely need to be shut down and do not emit carbon dioxide or other air pollutants such as nitrogen dioxides.  
• They have life spans of 2 – 10 times those of coal or nuclear plants.  
• In large systems dams are built across the natural flow of rivers.  
• Large dams however can help in flood control and supply a regulated flow of irrigation water to areas below the dam.

<tr>
<td>4 (c)</td>
<td></td>
<td><strong>Hydroelectricity</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Disadvantages**

Large dams cause water to backup flooding large areas of land destroying plant and animal habitat.

Dams destroy farmlands and displace people. Increased evaporation of water from the reservoir leads to serious water loss and increased salinity of the remaining water.

If the dam breaks people and property downstream may be endangered. Over time the reservoir traps nutrient-rich silt preventing it from enriching agricultural lands downstream.

**Hydroelectricity**

- The energy potential of hydroelectricity depends on the size and volume flow of water bodies. If large river systems exist in a developing country there is the potential for substantial contribution of hydroelectricity to the energy needs of the country. This would require damming the river which is costly. For countries with large rivers because of the environmental damage and the high cost only small plants will likely be developed to supply local needs.

| 6 (b) Cont’d |  | • Increase in the amount of packaging used, the development of refrigeration and of rapid transport networks have allowed products to be sent around the world which requires considerable packaging. Huge amounts of packaging, a large percentage of which is plastic, are used to make goods more attractive to the consumer.  
  • There has been an enormous rise in demand for convenience products, particularly for disposable consumer goods such as supermarket ready-made meals, disposable razors disposable baby diapers and pens, which are usually made from plastics. |  | KC AK PS |
| (c) (i) | 3.5 | • Recycling is defined as the collection and separation of materials from the waste stream and their subsequent reuse or processing to produce a marketable or resaleable product. (1) | 2 | |
| (ii) | 3.5 | Aluminium cans, plastic bottles | Any ONE 1 mark | |
| 6 (d) | 3.5 | Advantages  
• Recycling some material such as paper, aluminium and drink cans help to conserve non-renewable resources by reducing demand. This also reduces reliance on raw materials from a single country or a group of countries. | Any FOUR advantages 1 mark each | 4 |
### Question 6 (d)

<table>
<thead>
<tr>
<th>Syllabus Objective</th>
<th>Suggested Response</th>
<th>Instructions</th>
<th>Marks</th>
</tr>
</thead>
</table>
| 6 (d)             | - Reduction in demand through recycling will reduce production of goods and the associated energy consumption and emission of greenhouse gases.  
- Recycling results in a reduction of pollution from extraction industries, producing processes and waste disposal.  
- Recycling may result in reduced waste disposal costs, and the need for additional land-fill space  
- Discarded paper, glass, metal, foam and plastic packing produce are a major cause of litter and require expenditure for collection and cleaning. By encouraging the use of recyclable containers to reduce packaging this problem will decline. | Any FOUR disadvantages 1 mark each | 4     |

**Disadvantages**

- The production of recycled materials is not determined by demand but by production of waste. This causes economic problems since the supply of recycled products cannot respond directly to changes in demand.

- Recycling may require sponsorship, which is not always readily available, to be able to operate.
### Question 6 (d) Cont’d

- Some material recovery may not be environmentally beneficial since energy and resources consumption may be greater than that required to produce new material.

- Space must be available to store material to be recycled which may be limited in both urban and domestic environment.

- Recycling of some materials may be detrimental to the environment. (Examples, paper, some older glass recycling plants, improper recycling of vehicle batteries).

- Recycled products have to complete with virgin raw material already established in the market.

| 1 (b) (ii) | | - Between 1992 and 1995 the nitrate concentration was relatively constant at about 1 mg/L.  
- Between 1995 and 2007 the nitrate concentration increased annually.  
- In 2001 and 2003 there were some decreases in concentration to the previous years (2000 and 2002).  
- The annual concentration in 2007 was 15 mg/L. This is an increase of 14 mg/L when compared to the annual concentration in 1995. Or an overall 1400% increase in the concentration of nitrates during the period. | ONE mark for each point | 4 |

</table>
| 1 (d)    |                    | - Between 1992 and 1995 the nitrate concentration remained fairly constant at about 1 mg/L. This suggests that the normal or ambient nitrate concentration of the river before 1995 is about 1 mg/L based on the available data.  
- Since 1995 the annual nitrate concentration has increased annually above the ambient value.  
- Concentration of nitrates in water bodies such as river is usually low.  
- Since the nitrate concentration exceeds its ambient value and is higher than expected, the quality of the water between 1995 and 2007 is less than it was between 1993 and 1995. | | 4     |
1 (e)  

- Nitrates are soluble in water.  
- During periods of heavy rainfall, nitrates may be washed out of the soil on the farm.  
- The nitrogen-rich water flows into gullies or along natural storm water channels.  

These water channels empty directly into the river or into streams leading to the river.

**Diagram:**

**Electricity generation by hydropower in the Caribbean in 2007**

- **Title**: Electricity generation by hydropower in the Caribbean in 2007
- **Axes**: Electricity Generation, billion kWh vs. Year
- **Bars**: Bars for Belize, Dominica, Jamaica, St. Vincent, Suriname
### Question 2 (c) (ii)

#### Syllabus Objective

2.11

#### Suggested Response

- **Suriname** produced a significant amount of electricity using hydropower.
- Small island such as Antigua, Barbados, Grenada and St. Lucia did not use hydropower for electricity generation.
- St. Vincent and Grenada used hydropower to generate a small amount of electricity.
- Jamaica and Belize used hydropower to generate a moderate amount of electricity.

Belize & St. Vincent $0.18 + 0.02 = 0.20$ billion kWh (1)

Total for Caribbean $= 0.18 + 0.03 + 0.16 + 0.02 + 0.9 = 1.29$ billion kWh (1)

% for Belize & St. Vincent $= 0.2/1.29*100 = 15.5\%$ (1)

<tr>
<td></td>
<td>• Phosphorous in small quantities, is essential for plant growth and metabolic reactions in animals and plants.</td>
</tr>
<tr>
<td></td>
<td>• It is the nutrient in shortest supply in most fresh waters, with even small amounts causing significant plant growth and having a large effect on the aquatic ecosystem.</td>
</tr>
</tbody>
</table>
### Biochemical Oxygen Demand (BOD)

- This is a measure of the biodegradable organic content of waste. Biological oxygen demand means the amount of dissolved oxygen used for respiration during the aerobic metabolism of an energy source (e.g. organic matter) by bacteria or microorganisms.

### Chemical Oxygen Demand (COD)

- This is a measure of the total organic content of waste, both degradable and refractory.

- Chemical oxygen demand means the amount of oxygen required for maximum oxidation of the organic matter in a sample of the waste. This has implications for the availability of nutrients to aquatic organisms.

### Total Suspended Solids (TSS)

- This means all solids that are suspended in a sample of waste but are not dissolved.

- Total suspended solids are identified as the portion of a waste sample that does not pass through a glass fiber filter (i.e. non-filterable).
### Question 3 (b) Cont’d

<tbody>
<tr>
<td>3.5</td>
<td>- This has implications for the colour and turbidity of the water which may affect photosynthesis of aquatic plants and ultimately reduce the productivity of the aquatic ecosystem.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Phosphates**

A sample of water is filtered to remove suspended particulate matter (1). A test solution containing molybdate ions is added that forms a complex with phosphate (1). On addition of ascorbic acid, an intense blue colour occurs (1). The level of phosphate can be measured by comparing the colour obtained in the water sample with a range of colours obtained from known phosphate concentrations (1). OR The level of phosphate can be measured by using a spectrophotometer (1).

**Biochemical oxygen demand (BOD)**

A sample of water is collected and the initial concentration of oxygen in the mixture is measured by gas-sensing electrode OR by a Winkler titration (1). The bottles are placed in an incubator at 20°C for 5 days (1). After 5 days, the concentration of oxygen in the mixture is again measured (1). The BOD is calculated from the difference between these two measurements (1).
